1 Overview

This master's program in Entrepreneurship and Corporate Venturing (M.Sc.) at THI Business School is designed for those who want to shape the future of business – whether by **founding their own startup** or **driving innovation inside established companies**.

This three-semester, full-time program combines **academic rigor** with **hands-on experience**. You will gain a solid foundation in entrepreneurship theories, methods, and tools while applying them directly to real startup or corporate innovation projects. Along the way, you will learn to navigate uncertainty, test ideas in practice, and develop the resilience and creativity that successful entrepreneurs need. We emphasize **experiential learning**, international perspectives, and technological awareness. You will collaborate with entrepreneurs, innovators, and experts from across the globe and connect with the thriving startup ecosystem in and around Ingolstadt. Guest speakers, mentorship opportunities, and field trips provide insights that go far beyond the classroom.

Our university's strong **technology orientation** is a unique advantage. You will explore the opportunities and challenges of digital technologies and their role in shaping **future business models**. Combined with the interdisciplinary setting of the program, this creates a dynamic environment where ideas can grow into viable ventures.

Once you have completed the program, you will not only have built knowledge and skills but also a strong professional network and the confidence to apply entrepreneurial thinking in different contexts. Whether your goal is to launch a new venture, join a fast-growing startup, or act as an intrapreneur within a global corporation, this program provides the mindset, competencies, and opportunities to help you achieve it.

2 Introduction

Entrepreneurship is more than starting a company, it is about turning **ideas into impact**. This Master of Science in Entrepreneurship and Corporate Venturing program prepares you to do exactly that. It equips you with advanced academic knowledge, a practical mindset, and the international outlook necessary to thrive in today's rapidly changing business world.

At THI Business School, we believe that **entrepreneurship must be practiced**, not just studied. That is why you will work extensively on either your own startup project or on a corporate innovation challenge. Combined with academic rigor, close industry ties, and a strong technology orientation, this program offers a learning journey that is as demanding as it is rewarding.

2.1 Objectives

This program aims to prepare graduates for **entrepreneurial careers in both startups and established organizations**. To succeed in these environments, students need more than just enthusiasm. Students require methodical tools, strategic insights, and the ability to navigate uncertainty. Our objectives with the program are therefore twofold.

- (1) We want to provide a solid foundation in **theories, strategies, and methods of entrepreneurship and corporate innovation**, enabling students to analyze and solve complex problems from multiple perspectives.
- (2) We aim to foster **entrepreneurial action** through experiential learning, ensuring that students test, refine, and apply their ideas in real-world contexts.

Through this combination, graduates are equipped not only to create ventures of their own but also to become valuable innovators and intrapreneurs in established companies.

2.2 Admission Requirements

Applicants are expected to hold a bachelor's degree in a **business-related subject** (such as business administration, management, entrepreneurship, or innovation management) or a comparable qualification from a recognized institution. A minimum of **210 ECTS** is usually required.

Applicants with a bachelor's degree of 180 ECTS credits may also be admitted. In this case, however, they must provide proof of how the missing 30 ECTS credits are compensated. This proof must be submitted **no later than the end of the application period**. Compensation for the missing credits can be demonstrated in one of the following ways:

- **Practical experience:** Documented professional experience completed outside the degree program, equivalent in content and scope to the practical semester of a bachelor's degree in business.

- **Additional academic work:** Proof of practical or theoretical coursework and examinations successfully completed at a recognized German or foreign university, equivalent in content and scope to modules of a bachelor's degree in business.

All applicants complete an **aptitude assessment**, which considers their academic performance, entrepreneurial experience, and relevant coursework. This is not a written test but a structured evaluation of the applicant's fit for the program. The evaluation is based on a form that applicants complete during the application process.

As the program is **taught entirely in English**, a proficiency of at least level B2 of the Common European Framework of Reference is required. While not mandatory, learning German is strongly recommended to facilitate integration into the regional ecosystem.

The general admission requirements for THI master's programs can also be found at: <https://www.thi.de/en/studies/application/master-application>.

2.3 Target Group

The M.Sc. in Entrepreneurship and Corporate Venturing is designed for students who see their future in the world of **innovation**, **entrepreneurship**, and **business transformation**. It appeals to those who are eager to go beyond conventional management studies and want to learn how to create, grow, and sustain new ventures. Many of our students join with the ambition of founding their own startup, while others are particularly motivated by the idea of driving change inside established organizations. What unites them is a strong **curiosity for new ideas**, the willingness to **work in teams**, and the desire to actively **shape the future of business**.

The program is particularly well-suited for graduates of business-related bachelor's degrees who now wish to build a more profound expertise in entrepreneurship and innovation. At the same time, it also attracts students from more specialized areas, such as innovation management, digital business, or international management, who want to broaden their horizons and complement their previous studies with a stronger entrepreneurial orientation.

Students who choose this master's program often have different professional goals in mind. Some aspire to **launch their own startup** and see this degree as a unique opportunity to refine their business ideas, test them in practice, and build a network of like-minded peers and mentors. Others envision themselves joining a young and growing company in roles such as product management or business development, where they can contribute to **scaling the venture**. Another group is drawn to intrapreneurship, aspiring to become **change agents within established firms**, working on corporate innovation projects, new business models, or digital transformation initiatives. The program also prepares graduates for roles in consulting, venture capital, or innovation ecosystems, where entrepreneurial thinking is increasingly valued.

What connects these career paths is the ability to **combine theoretical knowledge with practical skills**, to **act confidently in uncertain environments**, and to **collaborate across disciplines and cultures**. The

program, therefore, welcomes students who are ambitious, open-minded, and motivated to use entrepreneurship as a tool for making a meaningful impact, whether in their own company, in a dynamic startup, or within a global corporation.

2.4 Program Structure

The program's systematic structure enables students to gradually develop competencies, test them in real-world entrepreneurial projects, and ultimately apply them in their own ventures or corporate innovation settings. The curriculum is organized into **five interconnected clusters**, each contributing to the program's distinctive profile.

The first cluster, **Entrepreneurial Competences**, provides the theoretical and methodological foundations of entrepreneurship. Students are introduced to contemporary Entrepreneurial Methods, learn to critically evaluate theories and models, and develop their own stance towards entrepreneurship. They also acquire the financial and strategic skills necessary for building and scaling new ventures through the module on Entrepreneurial Finance and Growth Management.

The second cluster, **Corporate Venturing and Digital Business**, focuses on how established organizations innovate. Students explore corporate venturing strategies, learn to navigate internal and external innovation ecosystems, and analyze the role of digital technologies in shaping new business models. The international dimension of entrepreneurship is addressed through the module on Global Entrepreneurship and Intercultural Leadership, which prepares students to operate confidently in diverse and cross-cultural contexts.

The third cluster, **Business Analytics**, equips students with the ability to make data-driven decisions as an essential skill in today's entrepreneurial world. Modules such as Lean Analytics and AI & Smart Data Science demonstrate how to leverage data for venture development and growth. An Elective course further allows students to tailor their studies to their individual interests, choosing from a range of modules at THI or even at international partner universities.

The fourth cluster, **Entrepreneurship & Venture Project**, spans the first two semesters and serves as the program's experiential learning backbone. Here, students work in teams either on their own startup idea. Each stage provides a structured way to apply theoretical learning to practice, supported by coaching, mentoring, and feedback from experts.

Finally, the fifth cluster includes **Research Methods for Business** and the **Master's Thesis**. In the research methods module, students strengthen their academic and analytical skills, which form the basis for writing their thesis. The thesis itself, accompanied by a final colloquium, is the culminating project of the program. It enables students to demonstrate their ability to apply academic knowledge and methodological rigor to a complex entrepreneurial challenge, often by building upon their venture project.

Curriculum Overview Entrepreneurship and Corporate Venturing		Semester 1 Winter Term		Semester 2 Summer Term		Semester 3 Winter Term

Total		24	30	24	30	4	30

2.5 Requirements for Advancement

The only formal advancement requirement relates to the master's thesis. The thesis topic can be assigned at the earliest at the beginning of the second semester, provided that at least 30 ECTS credits have been completed.

2.6 Program Principles

The guiding idea of the program is that entrepreneurship is best learned through hands-on experience, supported by a strong academic foundation. Its curriculum design rests on several principles.

- **Scientific foundation:** Students engage with current research, theories, and frameworks to develop strong analytical and methodological skills.
- **Experiential learning:** Through the venture project, students practice entrepreneurship, learn to experiment, reflect on outcomes, and adapt their strategies. Guest speakers, mentoring, and coaching support this hands-on experience.
- **Technology focus:** Given THI's strong technological orientation, the program integrates modules on digital technologies and data science, enabling students to critically assess and apply new technologies in business.
- **Ecosystem engagement:** Students are embedded in THI's entrepreneurial ecosystem, including the Startup Center, student clubs, and partners such as brigk, a hub for digital startups located on campus.
- **Global perspective:** International guest lecturers, diverse student cohorts, and optional study-abroad opportunities foster intercultural competence and a global outlook.

In short, the program combines academic knowledge, practical experience, and access to the ecosystem to shape entrepreneurial leaders who can thrive in both startups and corporations.

3 Program Profile

Graduates of the M.Sc. in Entrepreneurship and Corporate Venturing are equipped with a distinctive mix of **academic expertise**, **practical experience**, and **entrepreneurial mindset**. The program aims to prepare students to act confidently in dynamic environments – whether as founders, intrapreneurs, or innovation managers.

3.1 Mission Statement

At Technische Hochschule Ingolstadt, our motto "**Personalities and Innovations – for a future worth living**" reflects our commitment to nurturing entrepreneurial individuals who can transform ideas into impact. THI places the student at the heart of its mission, championing a balanced development of academic rigor, methodological skills, social competence, and a responsible, entrepreneurial mindset. The M.Sc. in Entrepreneurship and Corporate Venturing builds on this foundation by shaping individuals who not only understand the theoretical frameworks of innovation but also actively practice them. This master's program prepares students to address complex business challenges with creative solutions while grounding their approach in responsibility, sustainability, and global awareness.

Scientific excellence meets pragmatic application.

THI combines rigorous academic learning with industry relevance across its strategic priority areas, including digital transformation, sustainability, and mobility.

Our program echoes this ethos.

Students receive essential training in entrepreneurial methods, growth strategies, and digital business, while applying these insights in live startup or corporate innovation contexts. This blend of theory and practice fosters not only knowledge but also confidence in creating real-world impact.

Regional strength and global outlook.

As a university deeply rooted in its region, THI fosters strong networks with industry and society, promoting innovation, supporting spin-offs, and contributing to regional competitiveness. Meanwhile, the program itself embeds students in both local startup ecosystems and international dialogues, offering guest lectures, intercultural learning, and optional study-abroad pathways. Graduates emerge with the cultural agility to operate in global environments.

Human-centered learning in vibrant collaboration.

At THI, we value openness, tolerance, collaboration, and diversity. Our program brings together a diverse cohort with different academic and cultural backgrounds to work in small teams, guided by coaching, mentoring, and guest insights from seasoned entrepreneurs and industry experts. This creates a supportive yet challenging environment where creativity, accountability, and leadership can flourish.

Shaping futures with entrepreneurial spirit.

Guided by the THI mission and powered by hands-on learning, our master's program shapes entrepreneurial leaders: individuals who are curious, resilient, responsible—and ready to build ventures, transform organizations, or advance the entrepreneurial ecosystem itself. By the time they graduate, they are not just measured in ECTS credits but in impact potential.

3.2 Learning Objectives

In the Master's in Entrepreneurship and Corporate Venturing, the learning objectives translate the broader competency goals of the Business School into concrete outcomes for each module. They highlight not only the theoretical understanding of entrepreneurship and corporate innovation, but also the practical ability to apply this knowledge in real-world projects. By aligning modules with **clearly defined objectives**, the program ensures that **students build their expertise step by step**: from mastering entrepreneurial methods and analytical tools, to applying them in their venture projects, and finally demonstrating independent research competence in the master's thesis.

3.2.1 Business School Competency Goals and Learning Objectives

All graduate programs at THI Business School follow a shared set of competency goals and learning objectives. These overarching principles provide the academic framework within which each program, including the M.Sc. Entrepreneurship and Corporate Venturing, is designed. They ensure that all master's graduates develop not only advanced expertise in their chosen field, but also the mindset and skills needed to succeed as responsible leaders in a globalized economy.

At the competency level, our master's graduates are expected to:

- Grow into proactive **personalities** who combine responsibility, innovation, and leadership spirit.
- Acquire **comprehensive skills in general management** and the ability to develop business fields strategically.
- Prepare for success in a **global economy**, equipped with intercultural competence and international awareness.

At the learning objective level, these competencies are translated into more concrete outcomes for students:

- **Attitude of Responsibility:** Students integrate principles of corporate social responsibility into business and leadership contexts.
- **Creativity and Entrepreneurial Thinking:** Students apply creativity techniques, agile methods, and entrepreneurial principles in business decision-making.
- **Business Competence:** Students critically analyze strategies, operating models, and their impact on organizations.
- **Application Strength:** Students connect business tools with practitioner perspectives, ensuring that theory and practice reinforce one another.
- **Analytical Competence:** Students learn to systematically analyze scientific and business-related problems.
- **Intercultural Competence:** Students develop international understanding and intercultural insights, enabling them to work effectively across cultural boundaries.

Together, these general competency goals and learning objectives form the foundation for all graduate programs at THI Business School. They ensure that every student—regardless of specialization—develops the intellectual rigor, professional competence, and social responsibility needed to contribute meaningfully to business and society.

Mission	We develop personalities with responsible and innovative mindsets and comprehensive skills in general management for success in a globalized world .					
Learning Goals for graduates on master level	Our graduates are proactive personalities with responsible characters and innovative mindsets and have the spirit of leadership.		Our graduates have comprehensive skills in general management and the competencies to develop their business fields as leaders.		Our graduates drive analysis-based solutions and have competencies for success in a globalized economy .	
Learning Objectives for students on master level	Attitude of Responsibility Our students integrate their attitudes of sustainability and social responsibility in their fields of business life and leadership.	Spirit of Creativity and Entrepreneurial Thinking Our students apply creative thinking, agile methods, and entrepreneurial perspectives to real-world cases.	Business Competences Our students analyze the impact of business strategies, operational business value chains and digital business models and create competitive strategic and operational concepts in their business fields.	Application Strength Our students focus on applying state-of-the-art business tools and strategies to real-world scenarios and cases.	Analytical Competencies Our students use data-driven scientific methods to analyze business challenges and take appropriate actions.	Intercultural Competencies Our students apply social skills and language competencies for cooperative interaction with business partners in international environments.

3.2.2 Program-Specific Competencies

While all THI Business School graduates share a common foundation of management, analytical, and leadership competencies, the M.Sc. in Entrepreneurship and Corporate Venturing distinguishes itself by fostering program-specific competencies tailored to entrepreneurial careers.

First, students acquire a **deep understanding of entrepreneurial methods and mindsets**. They are trained to recognize and evaluate business opportunities, develop sustainable business models, and

apply lean and agile methods to build ventures step by step. This equips them with the ability to move confidently from ideas to implementation.

Second, the program emphasizes **venture growth and entrepreneurial finance**. Students learn how to secure funding, design growth strategies, and manage the financial complexities of scaling startups. These skills enable them to lead ventures through phases of uncertainty, expansion, and internationalization.

Third, graduates develop competencies in **corporate venturing and innovation**. They understand how established companies design and manage innovation programs, collaborate with startups, and use corporate venture building as a strategic tool. This prepares them for intrapreneurial roles, where they can foster innovation within complex organizations.

Fourth, the program integrates **digital technologies and data-driven approaches**. Students critically examine the role of digital business technologies, learn the principles of AI and Smart Data Science, and apply analytics to entrepreneurial decision-making. This gives them the ability to leverage technology in building scalable and future-oriented business models.

Finally, the program is designed to foster **an international and intercultural perspective on entrepreneurship**. Through global case studies, international guest lecturers, and diverse student teams, graduates build the capacity to navigate cultural differences and seize opportunities in global markets.

3.2.3 Entrepreneurship & Venturing Capstone Projects

A defining feature of the program are the Entrepreneurship & Venture Projects, a series of three interconnected modules that span the first two semesters. These courses serve as **capstone experiences**, bringing together insights from all other modules and providing students with a **platform to practice entrepreneurship** in real time.

In the first stage, students engage in **problem discovery** and **opportunity spotting**, whether it is for their own startup concept or a corporate innovation challenge. They apply methods of opportunity recognition, design thinking, and early validation. The focus lies on shaping possible project roadmaps and defining initial assumptions.

The second stage focuses on **validation**, **refinement**, and **early market traction**. Students conduct experiments, test prototypes, and evaluate feedback from stakeholders. Here, the knowledge gained in finance, digital business, and data analytics is directly applied to assess the viability of each idea.

The third stage moves toward **implementation** and **scaling**. Students refine their business model, develop a growth strategy, and prepare for potential market entry or corporate adoption. This stage culminates in a comprehensive presentation of results, often in front of experts, mentors, and ecosystem partners.

These project courses embody the program's commitment to experiential learning. They require students to experiment, reflect, and adapt, mirroring the real-world process of entrepreneurship. By continuously integrating insights from other modules into their project work, students not only strengthen

their academic learning but also **develop the resilience and creativity needed to thrive** in entrepreneurial careers.

3.2.4 Interdisciplinary Competencies

One key interdisciplinary competence is the ability to **navigate complexity and uncertainty**. Students learn heuristics for decision-making under incomplete information, develop tolerance for ambiguity, and acquire the resilience to pursue long-term goals despite short-term setbacks. These skills are critical in entrepreneurial ventures but equally valuable in corporate and consulting environments.

Another is **collaborative problem-solving**. Students work in diverse, multicultural teams where they must align perspectives, manage conflicts, and leverage each member's strengths. This fosters leadership skills, empathy, and the ability to communicate across disciplines and cultures.

The program also builds **analytical and data literacy competencies** that cut across domains. From lean analytics to AI-driven decision-making, students acquire the ability to interpret data, identify patterns, and draw actionable conclusions, which are skills that are highly relevant to startups, corporations, and policy organizations alike.

Furthermore, graduates develop a mindset of **creativity and opportunity recognition**. They are encouraged to challenge assumptions, explore alternative solutions, and remain open to innovation wherever it emerges. This creative competence is not confined to entrepreneurship but enhances performance in strategic management, product development, and organizational leadership.

Finally, the program strengthens **ethical awareness and social responsibility**. Students reflect on the societal implications of entrepreneurial decisions, from sustainability to digital ethics. This equips them to contribute responsibly to businesses and communities in their future careers.

3.2.5 Contribution of Individual Modules to our Objectives and Goals

Each module of the M.Sc. in Entrepreneurship and Corporate Venturing is designed not only to deliver subject-specific content but also to contribute to the broader competency goals and learning objectives of THI Business School. This mapping of modules to our overarching objectives is a core element of our **Assurance of Learning** (AoL) framework. Through AoL, we ensure that all programs are aligned with the mission of the Business School, that students acquire the intended competencies in a systematic way, and that continuous improvements are made where necessary. The resulting transparency allows students to understand how their individual learning journey contributes to their overall development as entrepreneurial leaders. Moreover, AoL is a central requirement for **AACSB accreditation**, helping us unify our teaching activities across programs and maintain international standards of quality and accountability.

Mission	We develop personalities with responsible and innovative mindsets and comprehensive skills in general management for success in a globalized world .					
Learning Goals for graduates on master level	Our graduates are proactive personalities with responsible characters and innovative mindsets and have the spirit of leadership.		Our graduates have comprehensive skills in general management and the competencies to develop their business fields as leaders.		Our graduates drive analysis-based solutions and have competencies for success in a globalized economy .	
Learning Objectives for students on master level	Attitude of Responsibility Our students integrate their attitudes of sustainability and social responsibility in their fields of business life and leadership.	Spirit of Creativity and Entrepreneurial Thinking Our students apply creative thinking, agile methods, and entrepreneurial perspectives to real-world cases.	Business Competences Our students analyze the impact of business strategies, operational business value chains and digital business models and create competitive strategic and operational concepts in their business fields. 3.3 Examination and Assessment Framework

The modules, their number of hours, types of courses, forms of assessment, and further provisions are set out in Appendix 1 of the Study and Examination Regulations (SPO).

The program utilizes various types of courses, each with its own specific assessment requirements. There are three different course types.

German Name	Abbreviation	English Name	Abbreviation
Seminaristischer Unterricht / Übung	SU/Ü	Seminar Course with Exercises	SC/E
Seminar	S	Seminar	S
Projekt	Prj	Project	Prj

Credit points are awarded in accordance with [the European Credit Transfer System \(ECTS\)](#). As a general rule, a maximum of 60 credit points is awarded per academic year. **One credit point corresponds to a student workload of 25 hours**, including both classroom instruction and independent study. The exact credit allocation for each module can be found in Appendix 1 of the SPO.

All modules and examinations are conducted in [English](#), as specified in this module handbook. The elective module may alternatively be completed in German, provided the student has sufficient language proficiency.

Modules are classified as either compulsory or elective:

- **Compulsory modules** are mandatory for all students of the degree program.
- **The elective module** must be selected individually from the options offered. Once chosen, it is treated as a compulsory module for the student in question, in accordance with the SPO.

The program uses a range of examination formats to assess different competencies. These are also listed in Appendix 1 of the SPO. The following table provides an overview of the examination types used in this master's program. As all compulsory modules are offered in English, the corresponding English designations are binding.

German Name	Abbreviation	English Name	Description
Kolloquium	Koll	Colloquium	Oral examination lasting 15–45 minutes in which students defend the results of their thesis.
Leistungsnachweis	LN	Assessment	May take the form of a written examination (schrP), seminar paper (SA), student research project (StA), oral examination (mdlP), or project work (PA). Specific details are defined in the respective module description.
Masterarbeit	MA	Master's thesis	Independent written thesis (around 90,000 characters with spaces, excluding front matter and appendices), prepared with a text-processing program.
Mündliche Prüfung	mdlP	Oral examination	Oral interview lasting 15 minutes per student, unless otherwise specified.
Projektarbeit	PA	Project work	Group project in which students work collaboratively on a task and present results orally and in writing. Each student must contribute individually. Oral presentation: approx. 15 minutes per student; written report: approx. 5–25 pages.
Seminararbeit	SA	Seminar paper	Written paper (3,000–6,000 words, approx. 10–20 pages) with accompanying oral presentation (15–20 minutes). The presentation may take place during the semester.
Studienarbeit	StA	Student research paper	Written paper with an individual research component (3,000–6,000 words, approx. 10–20 pages). No oral presentation required.
Schriftliche Prüfung	schrP	Written examination	Written exam of 90 minutes, unless otherwise specified in the module description.

The master's thesis represents the culmination of the program. Students are expected to demonstrate their ability to apply the knowledge acquired during their studies to a complex problem through independent academic work (§9 SPO). The thesis topic may be assigned no earlier than the beginning of the second semester, and only once at least 30 ECTS credits have been successfully completed. The standard processing time is six months. The thesis must be defended in a colloquium, consisting of a specialist presentation and a subsequent discussion of the scientific results. The colloquium grade is weighted at a ratio of 1:4 within the overall thesis grade. The master's thesis, including the colloquium, accounts for 30% of the overall degree grade.

3.4 Possible Career Paths

Graduates of the Master's in Entrepreneurship and Corporate Venturing are prepared for a broad range of professional fields. The program equips them with entrepreneurial competence, analytical capabilities, and leadership skills that can be applied across startups, established companies, and the wider innovation ecosystem. With its strong combination of academic rigor and experiential learning, the program opens up diverse career opportunities both in Germany and internationally.

Many graduates choose to pursue their own entrepreneurial ventures. They benefit from having developed their ideas throughout the Entrepreneurship & Venture Project, gaining first-hand experience of the challenges and rewards of building a business. Others prefer to join innovative companies, where they can take on strategic roles in developing products, scaling operations, or driving digital transformation. For students interested in combining entrepreneurial spirit with corporate resources, career paths in corporate venturing and intrapreneurship provide particularly attractive opportunities.

The following fields represent the most common and promising career paths for graduates:

- **Startup Founder or Co-Founder:** Launching a new venture based on innovative business models or technologies, either as a continuation of the student's own project or by joining a founding team.
- **Startup Team Member in Early-Stage Ventures:** Contributing expertise in areas such as business development, operations, or finance in a fast-paced, high-growth environment.
- **Corporate Venturing Specialist or Innovation Manager:** Driving innovation projects within established companies, leading intrapreneurial initiatives, and building bridges between startups and corporations.
- **Digital Transformation and Strategy Roles:** Helping companies adapt to technological change by developing new digital business models and implementing data-driven strategies.
- **Consulting and Advisory:** Working with management consultancies, innovation agencies, or accelerators to support entrepreneurs, corporate innovators, and investors with expertise in entrepreneurship and venture growth.
- **Venture Capital and Investment Management:** Supporting venture capital firms, corporate investors, or startup incubators in identifying, evaluating, and mentoring promising new ventures.
- **Research and Academic Careers:** Applying advanced research methods in entrepreneurship and innovation, potentially leading to doctoral studies or research positions in academia or applied research institutions.

By offering a wide spectrum of opportunities, the program ensures that graduates can tailor their career paths to their individual ambitions, whether that means building their own company, driving innovation within an established firm, or contributing to the entrepreneurial ecosystem as consultants, investors, or researchers.

4 Dual Studies

The Master's in Entrepreneurship and Corporate Venturing is primarily designed as a full-time study program. Most students choose this standard format, as it allows them to fully immerse themselves in their studies, focus on their venture project, and make the most of the program's international and entrepreneurial ecosystem.

In addition to the full-time option, students may also choose to pursue the degree as a dual study program. This pathway combines academic coursework with extended professional experience in a company. To take part, students must secure a participating partner company themselves. The university does not assign or provide company partners. Instead, it is the responsibility of each student to approach suitable companies and formalize a dual study agreement.

A number of companies are already approved as dual studies partner companies at THI. In addition, new companies can apply for approval if they wish to collaborate with the program and host dual students in the future. To ensure feasibility, the location of the partner company's office should be close enough to Ingolstadt to allow students to commute between campus and company site.

The dual study format offers the advantage of working intensively within a company while completing the master's program. This often includes writing the master's thesis in collaboration with the partner company, thereby directly linking academic research with practical business challenges. However, because of the additional commitments, the dual pathway typically requires more organization and effort than the standard study mode. Dual students spend at least 34 weeks or 8.5 months (including the master's thesis) at their respective company.

Further information on the dual studies option for master's programs at THI can be accessed here: <https://www.thi.de/en/studies/degree-programmes/dual-studies/master-dual/>

More information for companies about how to become a dual studies partner can be found here: <https://www.thi.de/en/service/dual-studies-information-for-companies/>

In accordance with THI's overarching concept for the design of dual study programs, the integration of university and company learning environments is based on three key aspects: legal/contractual integration, organizational integration, and content-related integration.

Legal Integration

The special features of the dual study program are defined in §29(3) and §30(5) of the APO as well as §8b of the THI Enrollment Statutes. Accordingly:

- When enrolling at THI, the training contract (for the combined study program) or the education contract (for in-depth practical training) with the partner company must be submitted by the end of the first semester at the latest.

- The final thesis must be written in cooperation with the partner company under the academic supervision of the university. At least one formal exchange between the university supervisor and the company is required. The main results of the thesis must be presented both to the partner company and to the supervising professor by the dual student.

Organizational Integration

Organizational integration is ensured through regular contact between dual students, THI, and the partner companies. The following contact points are institutionalized:

- An information session in the first semester for all dual students, led by the Dean of Studies.
- An annual meeting of all dual students in the degree program, organized by the program director.
- A yearly symposium for dual partner companies, organized by the THI Career Service ("Forum Dual").
- The program director serves as the central contact for the entire dual study program and also acts as a mentor for dual students.

Content-Related Integration

Content-related integration ensures that the knowledge and skills taught in the program are directly applicable within the company, and that practical experience feeds back into the academic studies. In the M.Sc. Entrepreneurship and Corporate Venturing, this integration takes place primarily through the master's thesis, which counts for 25 ECTS credits. According to §30(5), the thesis must be completed within the partner company, guaranteeing academic exchange between the university and the company. The results of the thesis must be presented both to the university supervisor and to the company partner.

5 Course Descriptions

The following section provides an overview of all modules included in the M.Sc. in Entrepreneurship and Corporate Venturing. Each description outlines the objectives, content, and expected learning outcomes of the respective course. Together, these modules form the academic and practical foundation of the program, equipping students with the knowledge, methods, and experience required to succeed as entrepreneurs and innovators.

5.1 Compulsory Modules

Entrepreneurial Methods			
Module abbreviation:	ECV_EM	SPO-No.:	1.1
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter semester only
Responsible for module:	Huber, Florian		
Lecturers:	Montanaro, Angela		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	1.1: Entrepreneurial Methods (ECV_EM)		
Lecture types:	1.1: S: Seminar		
Examinations:	1.1: schrP90 - written exam, 90 minutes (ECV_EM)		
Usability for other study programs:	None		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites. However, it is recommended that you develop at least a rudimentary understanding of the German startup eco-system before you start the course. For example, you could start by familiarizing yourself with the most current “Deutscher Startup Monitor” report.			
Objectives:			
1.1: Entrepreneurial Methods:			
On completing this module, the students will have achieved the following learning goals.			
Students are able to...			

Knowledge

- list different contemporary theories and models of entrepreneurship.
- describe the common development stages, business models, and funding sources of startups.
- analyze entrepreneurship in different organizational, geographic, and ecosystem contexts.

Methodology

- differentiate between various entrepreneurship-related theories, models, and ideas.
- evaluate and develop their own entrepreneurial profile.
- structure and justify entrepreneurial decisions under conditions of uncertainty and limited information.
- translate theoretical entrepreneurship concepts into actionable guidelines for early-stage ventures.

Social Competence

- discuss entrepreneurship-related theories, models, and ideas effectively with peers and stakeholder.
- collaborate effectively in entrepreneurial teams and reflect on team roles and dynamics.

Personality

- reflect on what entrepreneurship means to them and articulate a personal position towards entrepreneurship.
- demonstrate increased confidence in navigating ambiguity, uncertainty, and entrepreneurial risk.

Content:

1.1: Entrepreneurial Methods:

This course provides a structured overview of key themes, theories, and strategies in contemporary entrepreneurship. It enables students to critically reflect on entrepreneurial action, decision-making, and venture development across different contexts. The course is organized into four thematic parts, each spanning two to three weeks. Theoretical inputs serve as a foundation for in-class discussions, applied exercises, and selected take-home assignments.

Part 1: Entrepreneurship Today

This part introduces entrepreneurship as a societal, economic, and organizational phenomenon. It explores different forms of entrepreneurship, contrasts startups with established organizations, and examines entrepreneurial ecosystems with a particular focus on Germany and international contexts.

Part 2: Being an Entrepreneur

This part focuses on the individual and team level of entrepreneurship. It examines entrepreneurial mind-sets, traits, behaviors, and beliefs, as well as team dynamics and collaboration in entrepreneurial settings. A dedicated emphasis is placed on dealing with uncertainty and ambiguity as a core entrepreneurial capability.

Part 3: Theories in Entrepreneurship

This part provides an overview of influential entrepreneurship theories and frameworks. It traces the historical development of entrepreneurship theory and introduces contemporary approaches such as Lean Startup, Effectuation, Design Thinking, and Disciplined Entrepreneurship, highlighting their assumptions, strengths, and limitations.

Part 4: Basic Concepts of Startup Development

This part addresses foundational concepts of venture creation and early growth. It covers typical startup development stages, data-driven and digital business models, funding sources and investor roles, basic growth considerations, and approaches to assessing the potential future value of entrepreneurial ventures.

Additional remarks:

Additional literature and self-study resources will be provided throughout the course.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Entrepreneurial Finance & Growth Management			
Module abbreviation:	ECV_EF&GM	SPO-No.:	1.2
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Summer semester only
Responsible for module:	Marques Thiago		
Lecturers:	Jagdhuber Andreas; Marques Thiago		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	1.2: Entrepreneurial Finance & Growth Management (ECV_EF&GM)		
Lecture types:	1.2: SC / E: seminar course with exercises		
Examinations:	1.2: schrP- written exam, 90 minutes (ECV_EF&GM)		
Usability for other study programs:	The module is offered in other master's degree programs as well.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites.			
Objectives:			
1.2: Entrepreneurial Finance & Growth Management			
On completing this module, the students will have achieved the following learning goals.			
Students are able to...			
Knowledge			
- describe in-depth theoretical and practical aspects of entrepreneurial finance, particularly in start-up financing. - understand the business model of private equity and venture capital firms, including their refinancing and investment processes. - explain the process of scaling startup growth and its different applications for various venture stages.			
Methodology			
- assess conventional and innovative financing instruments for new ventures and start-ups. - analyze and appraise alternative courses of action through group work and case studies. - apply the Objective and Key Results methodology in a Business Plan context to project venture growth.			

Social Competence

- present and defend results in front of an audience through team presentations and discussions.
- work effectively in a team to produce theoretically sound and practicable ideas for entrepreneurial financing.

Personality

- develop and integrate financial and capital consequences of decisions into their own value system.

Content:

1.2: Entrepreneurial Finance & Growth Management

- Sources and forms of financing and evaluation of start-ups from seed financing to exit, e.g. through buy-back, IPO and sale of the company or transition
- Knowledge of the business model of private equity firms and refinancing: fundraising, investor relations and the return of funds
- Knowledge of the investment process: sourcing, screening, contracting, venture management and exiting
- Special forms of entrepreneurial activity (especially digital entrepreneurship, corporate and social entrepreneurship and family entrepreneurship)
- Digital startup financing and valuation, Crowdfunding, -investing as financing instruments
- Startup and innovation performance management
- Objective and Key Results methodology and Key Performance Indicators approach
- Marketing techniques applied for growth and hypergrowth scenarios
- Inbound and Outbound Sales processes, pipeline management and tactical and strategic sales performance
- Marketing and Sales integration, Omnichannel perspective and technological tendencies for growth management
- Customer Success management
- Budgeting, opex and capex, scenarios, financial performance indicators and pivoting strategies

Additional remarks:

The course is held on-site. However, under special circumstances, it may also take place virtually.

Technology Commercialization & Intellectual Property Management			
Module abbreviation:	ECV_TC&IPM	SPO-No.:	1.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Summer semester only
Responsible for module:	Kleyn, Madelein		
Lecturers:	Kleyn, Madelein		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	1.3: Technology Commercialization & Intellectual Property Management (ECV_EF&GM)		
Lecture types:	1.3: SC / E: seminar course with exercises		
Examinations:	1.3: SA - seminar paper (20 pages) with presentation (15 minutes) (ECV_EF&GM)		
Usability for other study programs:	The module is offered in other master’s degree programs as well.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites.			
Objectives:			
1.3: Technology Commercialization & Intellectual Property Management On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
- understand the concept of Technology Transfer and commercialization. - describe the relevance of intellectual property (IP) and intellectual property rights (IPRs) in the context of business innovation. - retrieve and process patent information using public databases (e.g. Espacenet), including identifying relevant publications and extracting key details. - compare protection options for digital business models and justify a selection based on risk, feasibility, and business goals.			
Methodology			
- consider and apply processes and options for commercializing IP. - analyze and evaluate the role of IPRs and patents in digital businesses.			

- filter, structure, and process relevant information from experiences and opinions.
- conduct a high-level de-risking assessment (business case, market need, readiness) and identify key gaps to address.
- use negotiation tools and tactics to prepare for, conduct, and close licensing and commercialization negotiations.

Social Competence

- communicate IP concepts clearly to founders, engineers, business teams, and external advisors.
- collaborate effectively with external stakeholders (e.g. patent attorneys, consultants) and manage outsourced workflows.
- collaborate constructively in deal simulations and negotiation exercises, balancing value creation and protection.

Personality

- evaluate and reflect on the IP/IPRs needs of startups and SMEs based on scientific research and practical relevance
- demonstrate analytical rigor and attention to detail when working with IP rights, claims scope, and evidence.
- show ethical judgment and respect for ownership, inventorship, and confidentiality.
- demonstrate integrity and professionalism when handling confidential information and partner expectations.

Content:

1.3: Technology Commercialization & Intellectual Property Management

- Defining technology transfer and commercialization
- Options of technology commercialization: The technology transfer process (starting a business or obtaining a license)
- Stakeholders' engagement
- Some considerations for technology commercialization for different industries
- IP Strategy: defining it, developing it, implementing it
- Derisking: Do I have a business and what about it?
- Derisking: Freedom to operate considerations
- Derisking: Funding considerations
- Technology licensing: Basics, negotiation tactics, different forms of licensing
- Dealmaking game
- Patent protection strategies
- Evaluating and valuing patents
- Successful practices in commercializing patents
- Organizing patent management
- Patent management by Industry
- Patent management in new technology environments
- Generally useful information for startups when dealing with patents

Additional remarks:

In the course of the semester, a maximum of 10 percent of the seminar paper grade can be earned as bonus points and credited towards the performance record if the short weekly assignments are completed and emailed to the lecturer. Further details are explained in class. Participation is voluntary. It is not possible to transfer bonus points to repeat examinations. The course is partially virtually (March to May) and partially held on-site (June). The slide deck for each lecture is uploaded in Moodle and students are required to attend lectures prepared, especially where pre-reading is indicated.

Corporate Venturing & Innovation			
Module abbreviation:	ECV_CVI	SPO-No.:	2.1
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter semester only
Responsible for module:	Funk, Andrea		
Lecturers:	Funk, Andrea		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	2.1: Corporate Venturing & Innovation (ECV_CVI)		
Lecture types:	2.1: SC / E: seminar course with exercises		
Examinations:	2.1: PA – Project work (15 pages) with presentation (15 minutes) during the semester (ECV_CVI)		
Usability for other study programs:	The module is offered in other master’s degree programs as well.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites.			
Objectives:			
2.1: Corporate Venturing & Innovation			
On completing this module, the students will have achieved the following learning goals.			
Students are able to...			
Knowledge			
• understand fundamental concepts of corporate venturing, including internal and external innovation strategies.			
Methodology			
• design and implement corporate venturing strategies that align with the parent company’s goals.			
• apply frameworks like the Corporate Venturing Navigator to systematically guide the venturing process.			
• identify, assess, and support promising business ideas within and outside corporate structures.			
Social Competence			
• navigate and build innovation ecosystems by collaborating with startups, venture capitalists, and other stakeholders.			

Personality

- recognize and develop tactics to overcome internal barriers to innovation within established firms.
- integrate competencies with the content of other modules to develop new, overarching approaches.

Content:

1.3: Corporate Venturing & Innovation

The module part **Corporate Venturing and Innovation** will follow the outline:

- Introduction to Corporate Venturing
 - Definitions and significance
 - Historical evolution and contemporary relevance
- Corporate Venturing Strategies
 - Internal venturing: corporate incubators, innovation labs
 - External venturing: corporate venture capital (CVC), strategic partnerships
 - Hybrid models and emerging trends
- The Corporate Venturing Process
 - Profiling: Identifying innovation opportunities
 - Designing: Structuring new business models
 - Investing: Funding and resource allocation
 - Harvesting: Exit strategies and integration into the parent company
- Building Innovation Ecosystems
 - Partnering with startups and VCs
 - Creating win-win collaborations
 - Case studies of successful innovation ecosystems
- Organizational Challenges and Solutions
 - Internal resistance to innovation
 - Strategies for managing stakeholder expectations
 - Tools for fostering an entrepreneurial mindset within corporations
- Case Studies and Real-world Applications
 - Analysis of corporate venturing practices from companies like Google, Siemens, and Roche
 - Guest lectures from industry experts
- Team-based development of a corporate venturing strategy for a selected company
- Final presentation and peer review

Additional remarks:

The course is held on-site. However, under special circumstances, it may also take place virtually.

Digital Business Technologies			
Module abbreviation:	ECV_DBT	SPO-No.:	2.2
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter Semester only
Responsible for module:	Gmelch, Oliver		
Lecturers:	Gmelch, Oliver		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	2.2: Digital Business Technologies (ECV_DBT)		
Lecture types:	2.2: SC / E: seminar course with exercises		
Examinations:	2.2: schrP90 – written exam, 90 minutes (ECV_DBT)		
Usability for other study programs:	none		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
The course has no explicit prerequisites. However, it is recommended that students have already dealt with basic IT principles before the start of the course, especially in the areas of hardware, software, networks and basic programming. A good source for this can be found in Laudon, 2022. At the same time, there are numerous instructional videos and articles on these topics that provide a good introduction to these subject areas.			
Objectives:			
2.2: Digital Business Technologies:			
On completing this module, the students will have achieved the following learning goals.			
Students are able to...			
Knowledge			
- understand the basic definitions, theories, and background of digital transformation and identify relevant phenomena and processes. - gain insights into information security principles, risk assessment, and take precautionary measures to ensure security in digital business processes.			
Methodology			
- identify and critically analyze the most important technologies in digital business, considering obstacles, critical success factors, and the integration of traditional systems into digital services. - evaluate techniques, methods, and phenomena in digital business technologies for their suitability and develop usage scenarios.			

Personality identify possible starting points for setting up their own companies within the digital business ecosystem.
Content: <i>2.2: Digital Business Technologies:</i> - Basics - Hardware and software in the context of digital business - Architectures, network topologies - Digital business architectures and API economy - Architectures - Technologies for creating APIs, roles and responsibilities - Application scenarios and examples - Selected front-end and back-end technologies - Overview and classification of technologies such as the Internet of Things (IoT), interaction and presentation technologies - Integration of classic business applications - Artificial intelligence (AI) and machine learning (ML) - Definition and differentiation of terms - Applicability and use in digital transformation scenarios - Intelligent automation - Cloud technologies - Definition of various application scenarios and - Selection criteria for cloud service providers - Considerations for the use of cloud services - Cyber security - Information security management systems (ISMS) - Risk assessment and treatment - Disaster recovery
Literature: <i>Compulsory:</i> - LAUDON, Kenneth C. und Jane Price LAUDON, 2022. <i>Management information systems: managing the digital firm</i>. 17. Auflage. Harlow, England: Pearson. ISBN 978-1-292-40328-1, 1-292-40328-4 - WIRTZ, Bernd W., 2021. <i>Digital business and electronic commerce: strategy, business models and technology</i>. Cham, Switzerland: Springer. ISBN 978-3-030-63481-0 <i>Recommended:</i> - CHAFFEY, Dave, Tanya HEMPHILL und David EDMUNDSON-BIRD, 2019. <i>Digital business and e-commerce management</i>. 7. Auflage. Harlow, England; New York: Pearson. ISBN 978-1-292-19333-5 - MILLIKEN, Connor P., 2019. <i>Python Projects for Beginners: A Ten-Week Bootcamp Approach to Python Programming</i>. 1. Auflage. ISBN 978-1484253540
Additional remarks: An overview is provided in the lecture part of the course; in the exercise part, students apply what they have learned with tasks and case studies. In addition, students have to prepare assignments independently and/or in groups outside of the course from time to time. The course is held on-site. However, under special circumstances, it may also take place virtually.

Global Entrepreneurship & Intercultural Leadership			
Module abbreviation:	ECV_GE&IL	SPO-No.:	2.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter semester only
Responsible for module:	McDonald, James		
Lecturers:	McDonald, James; Shirley, Thomas		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	2.3: Global Entrepreneurship & Intercultural Leadership (ECV_GE&IL)		
Lecture types:	2.3: SC / E: seminar course with exercises		
Examinations:	2.3: SA – Seminar paper (ECV_GE&IL)		
Usability for other study programs:	This module is offered as Elective in other degree programs.

None			
Recommended prerequisites:			
None			
Objectives:			
<i>2.3: Global Entrepreneurship & Intercultural Leadership</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge become familiar with contemporary investigations into intercultural business communication.			
Methodology - explore a variety of cultural systems beyond simple national categories. - understand and apply relevant communication and leadership theories and practices.			
Social Competence recognize the role and influence of culture in various entrepreneurial contexts.			
Personality discover opportunities for individualized exploration and analysis of specific intercultural communication contexts.			

Content:
<i>2.3: Global Entrepreneurship & Intercultural Leadership</i> Course content (discussions and readings) will focus on three large topics at the intersection of culture and entrepreneurship: • The practical relevance of intercultural communication to startups and entrepreneurship • The evolution and management of corporate cultures from startup to larger and more complex organizational forms • Practical examples of intercultural business communication (e.g. multicultural teams, leadership styles, negotiation)

Additional remarks:
The course is held on-site. However, under special circumstances, it may also take place virtually.

Lean Analytics			
Module abbreviation:	ECV_LA	SPO-No.:	3.1
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter semester only
Responsible for module:	Huber, Florian		
Lecturers:	Altmayr, Tobias; Huber, Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.1: Lean Analytics (ECV_LA)		
Lecture types:	3.1: SC / E: seminar course with exercises		
Examinations:	3.1: mdIP – oral exam, 15 minutes (ECV_LA)		
Usability for other study programs:	None		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites. However, this course covers several perspectives and methods in a short time. As a learner, you will be better able to grasp, discuss, and apply these, if you have a basic understanding of the core ideas of Lean Startup (Ries, 2011), Lean Analytics (Croll & Yoskovitz, 2013), as well as pretotyping and prototyping (Savoia, 2019). Besides the books mentioned below, there are many online videos and articles available that provide an excellent introduction to each of these themes.			
Objectives:			
3.1: Lean Analytics: On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
- understand the core concepts of the Lean Startup approach and its relevance for early-stage ventures. - explain the role of Lean Analytics in building a new business venture. - understand common prototyping and pretotyping approaches and their role in structured learning. - distinguish between vanity metrics, operational metrics, and actionable learning metrics.			
Methodology			
- construct useful learning metrics and measurement baselines. - conduct structured experiments and A/B tests. - apply data-informed decision-making to new ventures or ideas.			

Social Competence • collaborate effectively in teams to design, execute, and interpret experiments. • communicate analytical insights and recommendations clearly to entrepreneurial and managerial audiences. Personality • demonstrate confidence in designing and testing effective prototypes. • demonstrate confidence in dealing with uncertainty and incomplete data in entrepreneurial contexts. • reflect critically on their own assumptions, experimental designs, and decision-making logic.
Content: <i>3.1: Lean Analytics:</i> This course introduces students to Lean Startup as a foundation for systematic learning under uncertainty and then develops a comprehensive Lean Analytics skill set for early-stage ventures and corporate innovation contexts. Students learn how to translate assumptions into testable hypotheses, design meaningful metrics, run structured experiments, and interpret data to support entrepreneurial decision-making. A particular emphasis is placed on experimentation, learning velocity, and evidence-based pivot or persevere decisions. The course further expands the analytical toolkit through prototyping and prototyping approaches that enable fast, ethical, and cost-efficient learning. Theme 1: Lean Startup Foundations • Core principles of Lean Startup and hypothesis-driven entrepreneurship • Differences between entrepreneurial experimentation and traditional planning-based management • Learning under uncertainty and the logic of the build–measure–learn feedback loop • Aligning product development and experimentation with learning objectives Theme 2: Lean Analytics • Translating assumptions into testable hypotheses and learning goals • Designing actionable learning metrics and avoiding vanity metrics • Establishing baselines and benchmarks for early-stage decision-making • Designing and interpreting structured experiments, including A/B tests • Using analytical insights to support pivot, persevere, or kill decisions Theme 3: Prototyping and Prototyping for Learning • Purpose and limits of prototyping and prototyping in early-stage ventures • Overview of common prototyping and prototyping strategies and tools • Ethical considerations in experimentation with users and stakeholders • Integrating Lean Analytics into prototyping and experimentation processes
Literature: <i>Compulsory:</i> • CROLL, Alistair and Benjamin YOSKOVITZ, 2013. <i>Lean analytics: use data to build a better startup faster</i>. 1st edition. Beijing [u.a.]: O'Reilly. ISBN 978-1-449-33567-0, 1-449-33567-5 <i>Recommended:</i> • KONING, Rembrand, HASAN, Sharique, CHATTERJI, Aaron. <i>Experimentation and startup performance: Evidence from A/B testing (NBER Working Paper Series No. 26278)</i> [online]. Available via: http://www.nber.org/papers/w26278 • SAVOIA, Alberto, 2019. <i>The right it: why so many ideas fail and how to make sure yours succeed</i>. 1st edition. New York, NY: HarperOne. ISBN 978-0-06-288465-7, 978-0-06-288466-4 • RIES, Eric, 2019. <i>The lean startup: how constant innovation creates radically successful businesses</i>. London [u.a.]: Penguin Business. ISBN 978-0-670-92160-7
Additional remarks: Additional literature and self-study resources will be provided throughout the course.

The course is held on-site. However, under special circumstances, it may also take place virtually.

AI & Smart Data Science			
Module abbreviation:	ECV_AI&SDS	SPO-No.:	3.2
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Summer semester only
Responsible for module:	Frey, Markus		
Lecturers:	Frey, Markus		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.2: AI & Smart Data Science (ECV_LA)		
Lecture types:	3.2: SC / E: seminar course with exercises		
Examinations:	3.2: schrP – written exam, 90 minutes (ECV_LA)		
Usability for other study programs:	The module is offered in other master’s degree programs as well.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
The course has no explicit prerequisites.			
Objectives:			
<i>3.2: AI & Smart Data Science</i> On completing this module, the students will have achieved the following learning goals. Students are able to.... Knowledge • assess what Artificial Intelligence (AI) can achieve. • exhibit a deep understanding of artificial neural network architectures, internal functionalities, and advanced optimization techniques • command a high level of proficiency in Python programming specifically optimized for AI/ML workflows, including the expert application of core libraries such as NumPy, Pandas, PyTorch, and TensorFlow. • identify and critically evaluate the fundamental challenges, ethical risks, and strategic opportunities inherent in deploying AI and ML algorithms within global business environments. Methodology • apply methods for handling large amounts of data in a meaningful way. • identify, describe, and implement data science and AI use cases as examples. • develop tailored Python-based solutions for real-world data science projects, encompassing data ingestion, cleaning, exploratory analysis, and model deployment.			

- translate technical metrics (e.g., RMSE) into actionable business KPIs and strategic recommendations that drive executive decision-making.

Social Competence

- master the ability to bridge the gap between technical complexity and business strategy by translating AI/ML outputs into clear, compelling managerial insights for non-technical stakeholders.
- effectively advocate for data-driven strategies and AI investments, balancing technical feasibility with business constraints and organizational ROI.

Personality

- design successful introductions of AI solutions.
- transition from a passive learner to an active "solution architect," showing the initiative to transform ambiguous business problems into structured AI workflows.
- develop the persistence required to navigate the iterative nature of data science, including debugging, model failure, and the refinement of agentic workflows.

Content:

3.2: AI & Smart Data Science

- **Digitalization in the Business Environment:** Analyzing the organizational shifts required to transition from legacy processes to digital and AI-first business models.
- **Algorithmic Classification:** In-depth study of Supervised, Unsupervised, and Reinforcement Learning paradigms.
- **Algorithm Selection:** Criteria for choosing specific models (e.g., Random Forests, SVM, Clustering) based on business constraints and data availability.
- **Neural Network Foundations:** Understanding the architecture (layers, neurons, weights) and optimization (backpropagation) of artificial neural networks.
- **Large Language Models (LLMs):** Architecture of transformers and the shift toward generative AI.
- **Python for AI/ML:** Fundamental to advanced programming tailored for data science workflows.
- **Library Mastery:** Practical implementation using **Numpy** for numerical logic, **Pandas** for data manipulation, and **PyTorch/TensorFlow** for model building.
- **Agentic AI Workflows:** Designing autonomous systems that do not just predict but *act*—implementing multi-step planning, tool-use, and self-correction cycles.
- **Autonomous Decision-Making:** Engineering "agents" capable of independent problem-solving within defined business guardrails.

Additional remarks:

Additional literature and self-study resources will be provided throughout the course.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Entrepreneurship & Venture Project (Part I: Project layout)			
Module abbreviation:	ECV_EP_I	SPO-No.:	4.1
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	1
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter semester only
Responsible for module:	Huber, Florian		
Lecturers:	Funk, Andrea; Huber, Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	4.1: Entrepreneurship & Venture Project (Part I: Project layout)		
Lecture types:	4.1: S - Seminar		
Examinations:	4.1: PA: Project work (15 pages) with presentation (15 minutes) during the semester (ECV_EP_I)		
Usability for other study programs:	None		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
There are no prerequisites. Depending on what you personally want to get out of this course, you might consider diving into the themes and ideas of the literature suggestions on the reading list before attending this course. Besides the books mentioned below, there are many online videos and articles available that provide an excellent introduction to each of these themes.			
Objectives:			
4.1: Entrepreneurship & Venture Project (Part I: Project layout):			
On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
- understand different forms of entrepreneurial opportunities and how they emerge from problems, needs, and contextual change. - explain core principles of opportunity evaluation in startup and corporate venturing contexts.			
Methodology			
- systematically identify, analyze, and evaluate problems and opportunities using scientific entrepreneurship methods. - formulate testable hypotheses and apply qualitative and quantitative methods to validate problem assumptions. - visualize and communicate opportunity insights clearly at a level expected of a master's student in entrepreneurship.			

Social Competence

- collaborate effectively in diverse teams and contribute constructively to shared problem-framing processes.

Personality

- reflect on their individual entrepreneurial profiles and derive personal development goals.
- increase their tolerance for ambiguity, uncertainty, and incomplete information.

Content:

4.1: Entrepreneurship & Venture Project (Part I: Project layout)

This course is the first of three interconnected, project-based entrepreneurship courses. It focuses on problem discovery, opportunity framing, and early validation. The course follows an experiential, student-centric, and situated learning approach, requiring students to take ownership of their learning by actively applying scientific methods in real-world contexts.

Learning is structured around short lightning sessions that provide conceptual impulses. Deeper learning occurs through self-directed exploration, experimentation, reflection, and team-based project work. Lecturers act as guides from the side by framing contexts, designing targeted assignments, and providing continuous feedback.

Indicative lightning session topics include:

- Startup team composition, team routines, and shared mental models
- Desirability, feasibility, viability, and organizational capability
- Customer discovery and problem interviews
- User research methods and design thinking principles
- Opportunity spotting through trends, signals, and foresight
- Synthesizing ambiguous, incomplete, and contrarian information
- Customer and stakeholder profiling and segmentation
- Creativity methods for individuals and teams
- Value proposition design and early opportunity narratives
- Communicating problem insights and opportunity hypotheses

Literature:

Compulsory:

- UEBERNICKEL, Falk and others, 2020. *Design thinking: the handbook*. Singapore: World Scientific. ISBN 978-981-120-214-8, 978-981-12-0350-3

- CLARK, Tim, Alexander OSTERWALDER and Yves PIGNEUR, 2012. *Business model you: a one-page method for reinventing your career*. Hoboken, N.J.: Wiley. ISBN 978-1-280-59184-6
- OSTERWALDER, Alexander and Yves PIGNEUR, 2010. *Business model generation: a handbook for visionaries, game changers, and challengers*. Hoboken, NJ: Wiley. ISBN 978-0-470-87641-1, 0-470-87641-7

Additional remarks:

The course is held on-site. However, under special circumstances, it may also take place virtually.

Entrepreneurship & Venture Project (Part II: Proof of Concept)			
Module abbreviation:	ECV_EP_II	SPO-No.:	4.2
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Summer semester only
Responsible for module:	Huber, Florian		
Lecturers:	Funk, Andrea; Huber Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	4.2: Entrepreneurship & Venture Project (Part II: Proof of Concept) (ECV_EP_II)		
Lecture types:	4.2: S - Seminar		
Examinations:	4.2: PA - Project work (15 pages) and presentation (15 minutes) during the semester (ECV_EP_II)		
Usability for other study programs:	None		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
It is recommended to have completed or simultaneously attend the course “Entrepreneurship & Venture Project I”. There are no prerequisites. Depending on what you personally want to get out of this course, you might consider diving into the themes and ideas of the literature suggestions on the reading list before attending this course. Besides the books mentioned below, there are many online videos and articles available that provide an excellent introduction to each of these themes.			
Objectives:			
<i>4.2: Entrepreneurship & Venture Project (Part II: Proof of Concept):</i> This experiential learning course challenges students to explore and develop a variety of critical skills as well as domain knowledge relevant to entrepreneurship. On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge • know how solutions are iteratively developed and validated in entrepreneurial settings. • understand the role of experimentation, metrics, and feedback loops in venture development. Methodology • design, build, and test prototypes and MVPs using structured experimentation methods.			

- select and apply appropriate startup metrics and basic financial models to guide decisions.
- analyze experimental results and derive evidence-based pivot or persevere decisions.

Social Competence

- communicate complex ideas, insights, and results effectively to a variety of audiences.

Personality

- develop confidence in applying entrepreneurial methods in uncertain, real-world environments.
- manage setbacks, failure, and learning cycles constructively.

Content:

4.2: Entrepreneurship & Venture Project (Part II: Proof of Concept):

This course builds directly on the outcomes of Entrepreneurship & Venture Project I. The focus shifts from problem validation to solution development and market testing. The experiential, student-centric teaching philosophy is maintained, with lecturers continuing to mentor and challenge ongoing projects through targeted impulses and feedback.

Lightning sessions provide methodological depth and practical guidance, while teams independently apply and adapt methods to their projects in live environments.

Indicative lightning session topics include:

- Customer development and structured experimentation
- MVPs, prototyping, and prototyping strategies
- Testing prototypes with users and ethical considerations
- A/B testing and systematic experiments
- Key startup metrics and learning milestones
- Establishing problem–solution fit
- Pricing strategies and early revenue logic
- Simple financial modeling for startups
- Communicating solutions to customers, partners, and investors

Literature:

Compulsory:

Additional remarks:

Additional literature and self-study resources will be provided throughout the course.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Entrepreneurship & Venture Project (Part III: Implementation)			
Module abbreviation:	ECV_EP_III	SPO-No.:	4.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Summer semester only
Responsible for module:	Huber, Florian		
Lecturers:	Funk, Andrea; Huber, Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	4.3: Entrepreneurship & Venture Project (Part III: Implementation) (ECV_EP_III)		
Lecture types:	4.3: S – Seminar		
Examinations:	4.3: PA: Project work (15 pages) with presentation (15 minutes) during the semester (ECV_EP_III)		
Usability for other study programs:	None		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
It is recommended to have completed or simultaneously attend the courses “Entrepreneurial Methods” and “Entrepreneurship & Venture Project II” before starting this course. There are no prerequisites. Depending on what you personally want to get out of this course, you might consider diving into the themes and ideas of the literature suggestions on the reading list before attending this course. Besides the books mentioned below, there are many online videos and articles available that provide an excellent introduction to each of these themes.			
Objectives:			
4.3: Entrepreneurship & Venture Project (Part III: Implementation):			
On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
- differentiate between various growth and operational models for startups and apply their knowledge to real-world scenarios at a level expected from a master's student in entrepreneurship. - understand core principles of venture financing, valuation, and investor decision-making.			
Methodology			
- design scalable operational and organizational models for growing ventures. - prepare, refine, and deliver professional investment and growth narratives.			

- apply different valuation and financial projection methods to real startup projects.

Social Competence

- explain startups' fundamental principles and entrepreneurship methods to others at a high level.

Personality

- clearly communicate new business ideas on various levels and negotiate with potential clients, partners, and professional investors.
- critically evaluate their personal aptitude and motivation for entrepreneurial roles.

Content:

4.3: Entrepreneurship & Venture Project (Part III: Implementation):

This final project-based course completes the triple-diamond journey by focusing on scaling, operations, and investment readiness. The course retains its flexible structure and experiential orientation, emphasizing advanced application of entrepreneurship methods in complex, real-world contexts.

Lecturers continue to act as mentors and sparring partners while students take increasing responsibility for strategic, financial, and organizational decisions.

Indicative lightning session topics include:

- Achieving solution–market fit
- Entrepreneurial marketing and sales
- Growth strategies, blitzscaling, and growth management
- Agile and scalable operational models
- Managing teams and culture during growth
- Entrepreneurial leadership and decision-making
- Building ambidextrous organizations
- Startup valuation methods and funding strategies
- Refining pitch decks and investor communication
- Raising capital and working with venture capitalists

Literature:

Compulsory:

Additional remarks:

Additional literature and self-study resources will be provided throughout the course.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Research Methods for Business			
Module abbreviation:	ECV_RMB	SPO-No.:	5
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	3
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter term only
Responsible for module:	Huber, Florian		
Lecturers:	Huber, Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	5: Research Methods for Business (ECV_RMB)		
Lecture types:	5: SC / E: seminar course with exercises		
Examinations:	5:PA - Project work (5-25 pages) with oral presentation (15 minutes) (ECV_RMB)		
Usability for other study programs:	The module is offered in other master's degree programs as well.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Learning outcomes:			
<i>5: Research Methods for Business</i> The aim of the seminar is to prepare students for the researching and writing of high-quality academic papers (from seminar papers to master's thesis). In this context students...			
Knowledge - understand the scientific method and its application to business research. - know the characteristics of scientific research and academic writing to contribute to scientific and practical solutions. - know the general rules and principles of good academic work, as well as the consequences of non-compliance with these rules.			
Methodology - analyze the limitations and challenges of conducting research in business context. - apply quantitative and qualitative research methods to evaluate business performance and identify market trends.			
Social Competence self- and group-organize and work out different topic blocks for milestone dates.			

• overcome typical challenges in the research and writing process. • collaborate effectively to achieve academic excellence. • present business ideas and strategies persuasively to international audiences.
Personality • ensure research ethics and integrity. • demonstrate adaptability and resilience in managing uncertainties and disruptions. • cultivate self-motivation and time management skills to meet academic and professional deadlines.
Content:
<i>5: Research Methods for Business</i> • Understanding the compositional approaches for designing qualitative, quantitative, and mixed methods research in the social sciences • Deciding on a suitable research method • Literature research (library, databases, Internet, ...) • If necessary, survey of companies (e.g. questionnaire) • Preparation of academic papers and presentations according to academical standards
Literature:
<i>Compulsory:</i> • CRESWELL, John W. and J. David CRESWELL, 2023. <i>Research design: qualitative, quantitative, and mixed methods approaches</i>. 6th edition. Los Angeles; London; New Delhi; Singapore; Washington DC; Melbourne: Sage. ISBN 978-1-07-181794-0 <i>Recommended:</i> • BOOTH, Wayne C. and others, 2016. <i>The craft of research</i>. 4th edition. Additional remarks:
<i>5: Research Methods for Business</i> The course is held on-site. However, under special circumstances, it may also take place virtually.

5.2 Elective Modules

An elective (SPO No. 3.3) must be selected from the changing range. The actual selection offered each semester can be found in the timetable. Once a module has been successfully completed, it cannot be replaced by another. As the electives are not only offered by the Business School faculty but also from other degree programs of other faculties, seating is limited, participation in the electives listed below cannot be guaranteed. Electives may still be canceled at the beginning of the semester. Electives in German are also listed, but these can only be taken if sufficient language skills are available. The electives are taken in consultation with the degree program director.

The electives are listed below in alphabetical order.

Advanced Manufacturing Technologies			
Module abbreviation:	Adv_Man_Tech_M-EGM	SPO-No.:	3.3
Curriculum:	Programme	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Bednarz, Martin		
Lecturers:	Bednarz, Martin		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Advanced Manufacturing Technologies (Adv_Man_Tech_M-EGM)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – StA - Student research project without oral presentation 8-15 pages (Adv_Man_Tech_M-EGM)		
Usability for other study programs:	This module is offered as an elective by the master’s program Engineering and Management of the Faculty of Industrial Engineering and Management.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Advanced Manufacturing Technologies:</i> On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge - recall advanced manufacturing technologies and their industrial applications. - outline the latest trends in the industry. - recognize how modern manufacturing technologies may affect work processes and society. Methodology - deduct advantages and disadvantages of different technologies. - understand the physical principles of these technologies. Social competence - work and communicate effectively in teams.			
Content:			
<i>3.3: Advanced Manufacturing Technologies:</i> Advanced Manufacturing Technologies e.g.:			

• Additive Manufacturing • Laser Technologies • Technologies for Battery production • Manufacturing Technologies of fibre reinforced plastics

Additional remarks:
The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

AI in safety-related Systems			
Module abbreviation:	AIN_AI SafeRelSyst	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Kugele, Stefan		
Lecturers:	Kugele, Stefan		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: AI in safety-related Systems (AIN_AI SafeRelSyst)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – schrP - written exam, 90 minutes (AIN_AI SafeRelSyst)		
Usability for other study programs:	This module is offered as an elective by the master’s program Artificial Intelligence of the Faculty of Computer Science.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: AI in safety-related Systems: On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge - understand and classify the requirements for a safety-critical/relevant system. - discuss the risks and opportunities of using AI methods. - determine the dangers and risks of a technical, software-intensive, AI-based system. Methodology - reproduce and apply procedures from relevant standards. - understand and apply formal verification techniques. - create safety cases using, for example, argumentation patterns. - select and evaluate suitable architectures to achieve reliability goals.			
Content:			
3.3: AI in safety-related Systems: - Cyber-physical and safety-critical/relevant systems - Functional safety and key terms			

• Guidelines and standards for safe systems (e.g. IEC 61508, ISO 26262, ISO/TR 4804:2020) • Hazard analysis and risk assessment (G&R) • Determination of Safety Integrity Level (e.g. SIL, ASIL) • Safety analysis techniques • Security cases and argumentation patterns (e.g. GSN) • Security-specific architectures (design patterns: hardware patterns, software patterns) • Analysis techniques for explainability and formal verification (e.g. robustness)
Literature:
Compulsory: None Recommended: • BÖRCSÖK, Josef, 2025. <i>Functional Safety: Basic Principles of Safety-related Systems</i>. Berlin; Offenbach: VDE Verlag GmbH. 	English	1 semester	Variable term
Responsible for module:	Fend, Lars		
Lecturers:	Fend, Lars		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Consumer Experience Management (RCM_CEM 1.3. Ind. Elective)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN - PA - Project work (to be performed during the semester, written composition of a topic with practical relevance, approx. 10-15 pages, with presentation at the event (15 minutes)) (RCM_CEM 1.3. Ind. Elective)		
Usability for other study programs:	This course is offered by the master’s degree program Retail and Consumer Management.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Consumer Experience Management: On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge - develop a comprehensive and differentiated understanding of customer experience management in a digitalized and customer-oriented economy. - understand approaches to measuring customer satisfaction, customer loyalty, and customer lifetime value, and their significance for evaluating customer experience management strategies and measures. - identify and outline best practices and current trends in the field of customer experience management. Methodology - be proficient in central methods of qualitative and quantitative customer experience research, identify relevant KPIs, and apply appropriate feedback and analysis tools. - analyze, optimize, and design customer touchpoints using various operational measures, including digital technologies.			

Social competence - recognize and reflect on the ethical, social, and cultural implications of customer experience strategies and derive responsible recommendations for action. Personality - critically evaluate the contribution of strategically managed customer experience management to solving economic and social challenges. - reflect on their role as designers of customer experiences in organizations and recognize the importance of lifelong learning, especially in dealing with digital customer interactions, AI-supported services, and personalized offers. - develop a customer-focused, solution-oriented, and innovative attitude towards the design and further development of customer experience management measures.
Content: <i>3.3: Consumer Experience Management:</i> - The term and concept of consumer experience management - Consumer relationship versus consumer experience management - Consumer experience management (CXM) and business transformation - Digital consumer experience - Consumer experience frameworks - Consumer personas - The importance of empathy - Creating and measuring the consumer journey - Consumer journey management and improvement

Digital Analytics and Artificial Intelligence in Retailing			
Module abbreviation:	RCM_DA&AIR_1.3 Ind. Elective	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Jungbluth, Michael		
Lecturers:	Jungbluth, Michael		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Digital Analytics and Artificial Intelligence in Retailing (RCM_DA&AIR_1.3 Ind. Elective)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN - PA - Project work. Written composition approx. 10-15 pages with presentation 15 minutes. (RCM_DA&AIR_1.3 Ind. Elective)		
Usability for other study programs:	This module is offered by the master's program Retail and Consumer Management.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Digital Analytics and Artificial Intelligence in Retailing			
By the end of the course students are able to....			
Knowledge			
- explain the role of digital analytics in retail and consumer commerce and its integration into competitive business strategies. - describe, compare, and differentiate key data science methodologies (descriptive, predictive, prescriptive) in the context of retail decision-making. - assess how analytics and AI can automate processes, augment retail value chains, and generate sustainable competitive advantages. - analyze and articulate the responsibilities of an “analytics translator” in bridging business, analytics, and technology domains.			
Methodology			
Students can			
apply data exploration, inference, hypothesis testing, clustering, segmentation, visualization, regression, decision trees, and recommendation engine methods to retail use cases.			

- operate and evaluate digital analytics tools (e.g., Google Analytics) to collect, process, and interpret data for strategic and operational insights.
- formulate and justify actionable recommendations by linking technical analysis results to prioritized business problems.

Personality

Students

- research, organize, and critically evaluate technical and business information in digital analytics and AI.
- design and implement solutions for predominantly digital challenges in retail using analytics and AI.
- demonstrate resilience, adaptability, and constructive problem-solving when managing uncertainty and complexity in data-driven innovation processes.

Social competences

Students

- collaborate effectively in interdisciplinary teams, integrating perspectives from multiple functional areas.
- present, defend, and adapt analytics-based recommendations convincingly for diverse stakeholder groups.
- provide, receive, and incorporate constructive feedback to improve collaborative project outcomes.

Content:

3.3: Digital Analytics and Artificial Intelligence in Retailing

- Approximately 1/3 of each lesson will be devoted to the underlying analytics theory, to selected use cases within the field of retailing and to hands-on problem solving with open source software.
- We cover methods of data exploration, inference and hypothesis testing, clustering and segmentation, visualization and storytelling, regression, decision trees, experiments, testing and causation, recommendation engines, big data, machine learning and AI.
- Google Analytics will be introduced as the current market dominating digital analytics tool. Utilizing Google Analytics, students will learn how to use Digital Analytic software technology in the context of analytical, exploratory and reporting capabilities. Students will learn by doing: that is, guided by the instructor and using software, they will focus on data discovery and communicating insights.
- Open source code will be provided as Google Collaboratory notebooks for best traceability and learning support for IT-savvy as well as non-IT-savvy students.

Lecturers:	Patel, Dharmik; Weitz, Peter		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Energy Management and Energy Efficiency (WMod_EnManaEnEff_M-RES)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – schrP90 - written examination, 90 minutes (WMod_EnManaEnEff_M-RES)		
Usability for other study programs:	This module is offered as an elective by the master’s program Renewable Energy Systems of the Faculty of Mechanical Engineering.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Energy Management and Energy Efficiency:</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge - understand the design rules of a photovoltaic system and layout specific systems. - understand the different contributions to the electricity bill and know methods to reduce costs. - understand energy management systems and know how to manage exposed loads.			
Methodology - conduct simulations of supply versus demand for photovoltaic systems in industrial environments and understand methods to increase self-consumption of produced energy. - analyze and understand electric load profiles and extract exposed loads. - identify potential savings in cross-sectional technologies in industrial companies and apply measures to reduce energy consumption.			

Content:
<i>3.3: Energy Management and Energy Efficiency:</i> • Photovoltaic: design rules for solid photovoltaic system layout (connection module to inverter). Overall planning of photovoltaic systems. Simulation of provided energy • Electric load profile: analyzing electric load profiles and identification of exposed loads • Supply versus demand simulation of photovoltaic systems in industrial environments. Methods of supply and demand displacements • Contributions to energy costs of industrial companies and methods to reduce the cost level • Energy management systems in industrial companies (DIN EN ISO 50001 and DIN EN 16247) • Methods to identify, measure and manage energy consumption of exposed loads • Methods to analyze general cross-sectional technologies (compressed air, ventilation, cooling, process heating, lighting, heat recovery) • Methods to identify and reduce the energy consumption of cross-sectional technologies (electricity and other energy sources)
Literature:
<i>Compulsory:</i> • BILGE, Ali Nezihi, 2015. <i>Energy systems and management</i> [online]. Cham: Springer International Publishing PDF e-Book. ISBN 978-3-319-16024-5, 978-3-319-16023-8. Subjects of the module:	3.3: Global Business Practices in Innovation, Sustainability and Growth: Global Business Practices in Innovation, Sustainability and Growth (GBU_GBPIlSaG)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – SA - seminar paper with oral examination, elaboration 8 - 15 pages, presentation 15 - 20 pages (GBU_GBPIlSaG)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Global Business Practices in Innovation, Sustainability and Growth:</i> This module aims to equip students with a practice-oriented, integrative understanding of how innovation, sustainability, and growth are jointly managed in global business contexts. The course deliberately focuses on real-world managerial practices, transformation processes, and decision-making under uncertainty, rather than on functional specialization already covered in other modules (e.g., SCM, finance, or analytics). Drawing on international corporate practice, restructuring, M&A, and sustainable transformation, the course enables students to critically assess how global firms achieve scalable growth while balancing innovation dynamics and sustainability imperatives. On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge • Understand innovation, sustainability, and growth as interdependent strategic dimensions in global business. • Explain different global growth paths (organic growth, M&A, partnerships, platform strategies). • Understand sustainability as a value driver rather than a compliance exercise.			

- Identify success factors and failure patterns in global transformation and innovation initiatives.
- Distinguish between symbolic vs. substantive sustainability strategies in multinational firms.

Methodology

- Analyze global business situations using integrated strategic frameworks (innovation, growth, sustainability).
- Apply case-based reasoning to complex, ambiguous real-world situations.
- Develop strategic recommendations for international companies facing innovation or sustainability-driven change.
- Structure and defend management-level arguments under incomplete information.
- Translate sustainability ambitions into operational and strategic business logic.

Personality

- Reflect critically on managerial responsibility in global business decisions.
- Develop strategic judgment under uncertainty and competing stakeholder demands.
- Strengthen resilience and decision-making confidence in transformation contexts.
- Integrate ethical, ecological, and economic considerations into leadership thinking.

Social competencies

- Work effectively in diverse, international teams.
- Present and defend strategic positions in professional, board-level discussions.
- Engage constructively in controversial debates (e.g., growth vs. sustainability).

Content:

3.3: Global Business Practices in Innovation, Sustainability and Growth:

- **Global innovation practices**

Innovation systems in multinational corporations
Corporate entrepreneurship and ambidexterity
Managing innovation across borders and cultures
Role of leadership in innovation-driven transformation

- **Sustainability as a strategic driver**

Sustainability beyond ESG reporting
Value creation through sustainability-oriented business models
Decarbonization, circularity, and resource efficiency as growth levers
Governance, regulation, and stakeholder pressure in global markets

- **Growth strategies in global business**

Organic growth vs. M&A vs. partnerships
Scaling businesses across regions and cultures
Post-merger integration and transformation challenges
Growth under constraints (capital, regulation, legitimacy)

- **Transformation and turnaround perspectives**

Managing global restructuring and portfolio optimization
Strategic renewal in mature and capital-intensive industries
Balancing short-term performance with long-term sustainability
Lessons learned from real-world transformation cases

- **Integrative case discussions**

International case studies drawn from:

- o Infrastructure and industrial sectors
- o Consumer and retail-related transformations
- o Capital-intensive and regulated industries

Student-selected cases aligned with personal interests or career goals

<i>3.3: Global Business and Economics 1:</i> On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge • apply economic theories to improve strategic decision-making in global business. Methodology • develop methodological competencies to analyze competitive environments in global markets by leveraging their knowledge. Social competence • collaborate effectively within diverse and multicultural teams, contributing to the effectiveness of global markets. Personality • apply their competencies to make better decisions in complex business situations for themselves and others.			

Content:*3.3: Global Business and Economics 1:*

We take an application-oriented approach to study global markets, with special emphasis on topics such as:

- firm behavior, competition, and efficiency
- market power and collusion
- market failure and regulation
- emerging global challenges, such as climate change and inequality
- corporate social responsibility
- cross-cultural economics
- international trade and investments
- and many more if time permits

Literature:

Compulsory:

- MANKIW, N. Gregory and Mark P. TAYLOR, 2023. *Economics*. Hampshire: Cengage.
- ACEMOGLU, Daron, David LAIBSON and John A. LIST, 2018. *Economics*.

Recommended:

- VELASQUEZ, Manuel G., 2013. *Business Ethics: Concepts and Cases*. Harlow: Pearson Education, Limited. ISBN 978-1-292-02281-9, 978-1-292-03601-4
- LÜTGE, Christoph, UHL, Matthias, 2021. *Business Ethics: An Economically Informed Perspective* [online]. Oxford, United Kingdom: Oxford University Press PDF e-Book. ISBN 978-0-19-189685-9. Available via: 20.500.12854/112311.

Additional remarks:

The course is held on-site. However, under special circumstances, it may also take place virtually.
Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Global Business and Economics 2			
Module abbreviation:	GBU_GBE2	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Rauscher, Alois		
Lecturers:	Rauscher, Alois		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Global Business and Economics 2 (GBU_GBE2)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – schrP, written exam, 90 minutes (GBU_GBE2)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Global Business and Economics 2: Students will learn to...			
Knowledge			
- understand the role of multinational corporations in the global economy. - explain the determination of exchange rates and the international monetary system. - describe the dynamics of the foreign exchange market. - understand international debt and equity markets. - explain the functions and impacts of international financial institutions, such as the IMF and WTO, on global trade and commerce.			
Methodology			
- apply foreign exchange risk management techniques. - assess and adapt global financial strategies in response to currency fluctuations and international market trends. - conduct a country risk analysis. - apply concepts related to capital budgeting and cross-border merger & acquisition management of a multinational corporation.			

Personality - critically evaluate economic data to develop well-founded solutions during case study discussions. - approach complex business problems with critical thinking and creative problem-solving skills. Social Competence - collaborate effectively in multicultural teams to solve complex global business tasks. - demonstrate intercultural communication skills to foster strong professional relationships.
Content: <i>3.3: Global Business and Economics 2:</i> - The role of multinational corporations in the global economy - Corporate governance from a global perspective - The determination of exchange rates and the international monetary system - The foreign exchange market - Foreign exchange risk management - International debt and equity markets - The impact of economic policies on global business and country risk analysis - Capital budgeting for the multinational corporation - Critical aspects regarding cross-border mergers and acquisitions
Literature: Compulsory: None Recommended: - EUN, Cheol S. , Bruce G. RESNICK and Tuugi CHULUUN , 2021. <i>International Financial Management</i>. New York: McGraw-Hill. ISBN 978-1-260-57531-6; 1-260-57531-4 - SHAPIRO, Alan C. and Paul HANOUNA , 2020. <i>Multinational Financial Management</i>. 11. edition. Hoboken: Wiley. ISBN 9781119559849
Additional remarks: The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Inner Capacities for Personal Strength and Regenerative Change			
Module abbreviation:	SMT_InnCapaPers-Strength_FW	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Risi, Annette		
Lecturers:	Risi, Annette		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Inner Capacities for Personal Strength and Regenerative Change (SMT_InnCapaPersStrength_FW)		
Lecture types:	3.3 SC / E: seminar course with exercises		
Examinations:	3.3 LN – PA - Project Work, 8 - 15 pages elaboration, 15 - 20 pages presentation (SMT_InnCapaPersStrength_FW)		
Usability for other study programs:	This module is offered as an elective by the master’s degree program Sustainability Management and Technologies of the Faculty of Sustainable Infrastructure.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Inner Capacities for Personal Strength and Regenerative Change</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge - understand how personal well-being and societal transformation are deeply intertwined. - differentiate between presencing and downloading as well as between happiness and well-being.			
Methodology - design and implement interventions that strengthen mental, emotional, and social well-being in times of volatility. - facilitate co-creation and regenerative societal transformation processes in living labs that bring together diverse perspectives. - develop pathways to activate sustainable well-being across individual, organizational, and community levels.			

Social competence • build and maintain healthy relationships. Personality • reflect on their own thought patterns, habits, and narratives to expand empathy and conscious choice. • cultivate personal resources for stress management, meaning, well-being, strength-based action, and flow. • practice self-care and self-compassion.
Content: <i>3.3: Inner Capacities for Personal Strength and Regenerative Change</i> • Connections between national health status of social groups and climate change drivers • Principles of regenerative neuroscience and holistic health • Practices of deep listening, perspective-taking, mindfulness and embodied awareness inspired by MBSR, PERMA, Theory U, and Social Presencing Theater • Mental clarity and focus in an age of information overload • Identification of personal and systemic unsustainable patterns, with hands-on methods to transform them • Cultivation of grit, vulnerability, openness, optimism, and curiosity as capacities for everyday life and sustainable change • Frameworks for evaluating regenerative initiatives in organizational and societal systems, connecting knowledge with real-world application • Intervention design and practice to foster social connectedness, purpose, and long-term flourishing, contributing to individual growth and societal progress • Case studies and cross-cultural dialogue on sustainable well-being
Literature: <i>Compulsory:</i> None <i>Recommended:</i> • HARARI, Yuval Noah, 2024. <i>Nexus: a brief history of information networks from the Stone Age to AI</i>. New York: Random House. Additional remarks: All individual reflections will be treated confidentially and do not have to be shared in the group. There are no “right” or “wrong” answers — every experience counts. There is an opportunity to earn 9 bonus points, which will be credited toward the examination performance. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases. The course is held on-site. However, under special circumstances, it may also take place virtually. This course takes place on the NEUBURG campus!

International Collaborations in Mobility			
Module abbreviation:	GBU_ICiM	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Wagner, Harry		
Lecturers:	Wagner, Harry		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: International Collaborations in Mobility (GBU_ICiM)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – mdIP, oral exam, 15 minutes (GBU_ICiM)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: International Collaborations in Mobility:</i>			
Knowledge			
The students			
- are capable to identify, analyze, and contextualize international collaborations in mobility (automotive) and transport ecosystem within a management context (for passenger and freight transport systems). - are familiar with the political, technical, (transport-) economic, social, legal (standards and regulations), and ecological implications of international collaborations. - can describe and analyze national, european, and international use cases of collaborations. - are familiar with the (business) economic and administrative structures between various stakeholders of collaborations (business, academia, politics, public administration, society).			
Methodology			
The students			
- can professionally classify methods of mobility and traffic management and apply them exemplarily to use cases. - can verbally reproduce the knowledge gained in the module.			
Personality			
The students			

- understand the fields of activity in international collaborations in mobility.
- enhance their ability to think strategically and understand the international complexity in the mobility ecosystem.

Social Competencies

The students

- can build international competencies through the analysis of international case studies, thus preparing for potential intercultural collaboration in their future professional life.
- intensify their skills to work in a team, as case studies in the module are worked on and presented together.

Content:

3.3: International Collaborations in Mobility:

1. Theoretical foundations and term definitions (national, Europe, international)
 - a. mobility ecosystem (passenger public)
 - b. transport ecosystem (freight)
 - c. automotive ecosystem / cluster
 - d. digital and physical infrastructure
2. Use cases for international collaborations and partnerships (projects) in mobility:
 - a. public transport
 - b. freight transport (slot systems)
 - c. automotive sector
3. Holistic methods for analyzing the use cases and forms of administration/management
 - a. PESTEL analysis (P - Political E - Economic S - Social T - Technological E - Environmental L - Legal)
 - b. Stakeholder Analysis
 - c. Public-Private Partnership (PPP or P3)

Literature:

Compulsory:

- HU , Yi, XU , Qixiong, FIELD, Brian, XIA , Bo, WU , Guangdong , 2024. Governing collaborative networks in mega transport projects development: Integrative findings from 34 cases worldwide. In: *Transport Policy*. (150), p.162-173. ISSN 1879-310X

Recommended:

None

Additional remarks:

The course is held on-site. However, under special circumstances, it may also take place virtually.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Mobile UX Prototyping			
Module abbreviation:	UXDM_MUXP	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Nestler, Simon		
Lecturers:	Nestler, Simon		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Mobile UX Prototyping (UXDM_MUXP)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – SA - seminar paper and presentation (UXDM_MUXP)		
Usability for other study programs:	This module is offered as an elective by the master’s program User Experience Design of the Faculty of Computer Science.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Mobile UX Prototyping			
On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
- acquire in-depth knowledge of the mobile market and identify what characterizes competitive apps. - gain a thorough understanding of the concept of push notifications and apply it to create new app user experiences. - develop knowledge to reliably and successfully address new opportunities and challenges in user experience.			
Methodology			
- analyze and interpret the mobile user experience of existing applications and derive appropriate solutions. - develop mockups and prototypes for mobile applications independently. - implement the "Offline First" paradigm in their developments.			

Social competence • present their usability studies on mobile apps in a focused manner and moderate sound discussions with the audience. • communicate professionally at an adequate level of abstraction using appropriate forms of media. • gain extensive experience in intercultural cooperation. Personality • develop sufficient abstraction skills and analytical thinking to independently familiarize themselves with new and unfamiliar areas of expertise and complex problems, and implement solutions for them.
Content: 3.3: <i>Mobile UX Prototyping</i> • “How to build a billion-dollar app” • The mobile market • Technologies for apps • Navigation, menus and patterns • Search strategies and auto-completion • Types of forms incl. authentication/passwords • Tables and tabular data • Tools, toolbars, and screen control • System status, affordance, and feedback/error messages • Help systems, User guides/FAQs, contextual help • Tutorials and invitations: Engage the user • Social patterns and gamification • Visualization: Charts, dashboards, tables • “Anti-patterns”: Metaphors and mental model (mismatch)
Literature: <i>Compulsory:</i> • LIEBEL, Christian, 2019. <i>Progressive Web Apps: das Praxisbuch</i>. 1. edition. Bonn: Rheinwerk Verlag. ISBN 978-3-8362-6494-5 • NEIL, Theresa, 2014. <i>Mobile design pattern gallery: UI patterns for smartphone apps</i>. 2. edition. Additional remarks: The teaching concept of this course closely connects theoretical foundations and practical applications. Thus, this course is designed workshop-like: The learning contents are presented in relation to concrete areas of application and are deepened by concrete group and single tasks. The active participation of the students is explicitly desired. The course is held on-site. However, under special circumstances, it may also take place virtually.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Natural User Interfaces			
Module abbreviation:	UXDM_NUI	SPO-No.:	3.3
Curriculum:	Programme	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Scherer, Johannes		
Lecturers:	Scherer, Johannes; Sturm, Christian; Uebelacker, Stefan		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Natural User Interfaces (UXDM_NUI)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN - PA - project work (min. 10 pages excluding tables and graphs, font size 10-12 pt.) and a presentation (10-15 minutes) (UXDM_NUI)		
Usability for other study programs:	This module is offered by the master's program User Experience Design of the Faculty of Computer Science.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Natural User Interfaces On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge - describe basic terms and possible applications for natural user interfaces. - acquire detailed knowledge of methods and concepts for the realization of natural user interfaces. - select suitable hardware and software solutions for the realization of projects/applications with natural user interfaces. - gain comprehensive knowledge of how to plan, design, and implement their own natural user interfaces. Methodology - apply principles of project management and teamwork in the context of a project on natural user interfaces. - apply the user-centered design process in their own projects. - prototype and evaluate solutions.			

- comprehensively evaluate the practicality of the applications they develop.

Social competence

- work effectively and efficiently with people with different professional and personality profiles.
- communicate professionally at an adequate level of abstraction using appropriate media forms.
- gain a high level of experience in intercultural cooperation and successfully work in global teams.

Personality

- develop a sufficient capacity for abstraction and analytical thinking to independently familiarize themselves with new and unfamiliar specialist areas and complex problems, and implement solutions.
- gain analytical and problem-solving capabilities.

Content:

3.3: Natural User Interfaces

- Technologies: Hardware and software solutions for natural interfaces, frameworks, best practices
- Types: Touch interfaces, multi-touch interfaces, pen-based interfaces, gestural interfaces, conversational interfaces (speech)
- Interaction: Interaction paradigms, gesture sets, spoken dialogs, primitives, design principles, interaction with natural interfaces
- User Experience: Prototype implementation, User-centered gesture and speech dialog design, Wizard-of-Oz implementation
- Evaluation: Testing gestures and spoken language understanding, NUI Mock-Ups, Experiments for conversational and gesture interfaces, Remote testing of NUIs

For detailed project description please see the Moodle course page for the Master User Experience Design. (<https://moodle.thi.de/course/view.php?id=6470#section-8>)

Literature:

Compulsory:

- WIGDOR, Daniel and Dennis WIXON, 2011. *Brave NUI World: designing natural user interfaces for touch and gesture*. Amsterdam [u.a.]: Morgan Kaufmann. ISBN 978-0-12-382231-4

Recommended:

- LAVIOLA, Joseph J. and others, 2017. *3D user interfaces: theory and practice*. S. edition. Boston: Addison-Wesley. ISBN 0-13-403432-5, 978-0-13-403432-4

Selected Topics in Digitalization			
Module abbreviation:	SelTop_Digi_M-EGM	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Zehbold, Cornelia		
Lecturers:	Zehbold, Cornelia		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Selected Topics in Digitalization (SelTop_Digi_M-EGM)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – StA - Student research project without oral presentation 8-15 pages (SelTop_Digi_M-EGM)		
Usability for other study programs:	This module is offered as an elective by the master’s program Engineering and Management of the Faculty of Engineering and Management.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Selected Topics in Digitalization:</i> On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge • know the drivers of digitalization as well as the typical phases, from digitizing existing processes to developing new digital business models and ecosystems. • gain insights into the possible effects of digitalization in society. • understand that it is no longer acceptable to just look at processes and data in isolation. Methodology • analyze problems in the field of digitalization using a systematic approach and present alternative solutions. Social competence • apply digital collaboration effectively in teams.			

Personality work with current software to enhance their understanding and skills in digital environments.
Content: <i>3.3: Selected Topics in Digitalization:</i> - Disruptive technologies - Drivers of digitalization - Dimensions of digitalization at a glance: business models, processes, products, integration and communication of products with the environment, human-machine interface - Digital business models and value networks - Digital business processes - Process mining and Robotic process automation (RPA)
Literature: <i>Compulsory:</i> MORABITO, Vincenzo, 2016. <i>The Future of Digital Business Innovation: Trends and Practices</i> [online]. Switzerland: Springer PDF e-Book. ISBN 978-3-319-26874-3, 978-3-319-26873-6. Available via: https://doi.org/10.1007/978-3-319-26874-3 <i>Recommended:</i> None
Additional remarks: Literature depends on the topics the students are working on. The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

SUS - Social Entrepreneurship			
Module abbreviation:	GBU-SUS-SE	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Huber, Florian		
Lecturers:	Huber, Florian		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: SUS - Social Entrepreneurship (GBU-SUS-SE)		
Lecture types:	3.3:SC / E: seminar course with exercises		
Examinations:	3.3: LN – PA - project work (GBU-SUS-SE)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: SUS - Social Entrepreneurship:</i> This course equips students with a structured understanding of social entrepreneurship and the competencies required to develop, evaluate, and communicate social venture ideas. Upon successful completion of the course, students will have developed the following competencies: Knowledge - Students explain the principles, boundaries, and core logics of social entrepreneurship and distinguish it from commercial entrepreneurship, NGOs, and public-sector initiatives. - Students analyze different types and models of social entrepreneurship and explain how social ventures create and sustain social and environmental impact within specific ecosystems. Methodology - Students apply appropriate frameworks to structure, visualize, and analyze social entrepreneurship business models. - Students define and critically reflect on impact goals and impact measurement approaches for social ventures. - Students develop, test, and refine solution concepts through prototyping and scenario-based thinking under conditions of uncertainty. - Students synthesize insights into a coherent and persuasive pitch for a social venture idea.			

Personality

- Students reflect on their personal motivations, values, and ethical considerations related to social entrepreneurship.
- Students develop self-efficacy and resilience in dealing with complexity, ambiguity, and social problem contexts.

Social Competencies

- Students collaborate effectively in teams to develop a social venture concept and mobilize relevant resources and stakeholders.
- Students communicate social entrepreneurship ideas clearly and appropriately to diverse audiences.

Content:

3.3: SUS - Social Entrepreneurship:

The course is structured around three interrelated themes that combine conceptual grounding, skill development, and action-oriented preparation.

Theme 1: Understanding Social Entrepreneurship

- Definitions, principles, and boundaries of social entrepreneurship
- Differences and overlaps with commercial entrepreneurship, NGOs, and public-sector initiatives
- Typologies and models of social entrepreneurship
- Successes, failures, and critical tensions in social entrepreneurship practice
- The German and European social entrepreneurship ecosystem

Theme 2: Developing Social Entrepreneurship Capabilities

- Structuring and visualizing social entrepreneurship business models
- Opportunity identification and need-based problem framing
- Scenario building and dealing with uncertainty in social ventures
- Impact logic models and approaches to impact measurement
- Prototyping and experimentation under social and resource constraints
- Communicating social venture ideas through storytelling and pitch formats

Theme 3: Preparing for Action in Social Entrepreneurship

- Personal motivation, values, and ethical challenges in social entrepreneurship
- Team composition, roles, and stakeholder engagement
- Funding mechanisms for social ventures (e.g., grants, impact investing, hybrid financing)
- Navigating startup ecosystems, support organizations, and policy frameworks
- Pathways from idea to implementation

Lecturers:	Loza Adaui, Cristian Rolando		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: SUS - Social Impact, Sustainability and Compliance (GBU-SUS-SISC)		
Lecture types:	3.3: SU/Ü - lecture with integrated exercises		
Examinations:	3.3: LN – PA - project work (GBU-SUS-SISC)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: SUS - Social Impact, Sustainability and Compliance:</i> This course broadens students' understanding of the evolving role of business in addressing societal challenges. Through a combination of theoretical exploration and action learning in collaboration with the Social Impact Start-Up Academy (SISTAC), students will gain critical knowledge and skills in social impact assessment, sustainability management, and compliance. The course emphasizes the practical application of concepts through real-world engagement with a social impact start-up. At the end of the course: Knowledge - Students understand sustainability management principles and their practical application in global business contexts. - Students learn and apply diverse methods for assessing social impact. - Students demonstrate knowledge of global regulatory frameworks and compliance requirements relevant to international business operations. Methodology - Students deepen their understanding of global business management by engaging directly with a social impact start-up through hands-on collaboration. - Students enhance their analytical skills by independently evaluating business models and developing actionable proposals that address social impact, sustainability, and compliance.			

- Students analyze the influence of cultural and social factors on managerial interventions within the complex socio-economic systems of a social-impact start-up operating in a developing country.
- Students refine their proposals based on iterative feedback from stakeholders, ensuring alignment with the real needs of the start-up.

Personality

- Students strengthen an awareness of their role as change agents within the global business community and its significance for advancing sustainable development.
- Students enhance their capacity for self-reflection in the action-learning process.
- Students embrace sustainability as a personal and professional value, integrating it into their future endeavors.
- Students cultivate a strong ethical mindset, enabling responsible decision-making and business practices in diverse global contexts.

Social Competence

- Students develop strategies to effectively address the organizational challenges of working in groups.
- Students learn to communicate with sensitivity to intercultural differences and expectations.
- Students acquire the skills to effectively communicate the importance of sustainability, social responsibility, and compliance to internal and external audiences.
- Students evaluate critically and improve their debate, presentation, and communication skills through practice and reflection.

Content:

3.3: SUS - Social Impact, Sustainability and Compliance:

- Stakeholder capitalism and corporate purpose in the 21st century
- Foundations of sustainability and social impact
- Social Impact assessment tools and methods
- Sustainability management in practice
- Compliance and global regulatory frameworks
- Action learning: Social impact start-up collaboration

Software Engineering			
Modulkürzel:	WMod_SWEng_M	SPO-Nr.:	3.3
Zuordnung zum Curriculum:	Studiengang u. -richtung	Art des Moduls	Studiensemester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Modulattribute:	Unterrichtssprache	Moduldauer	Angebotshäufigkeit
	Deutsch	1 Semester	Wechselndes Angebotssemester
Modulverantwortliche(r):	Bock, Jürgen		
Dozent(in):	Bock, Jürgen; Radtke, Max		
Leistungspunkte / SWS:	5 ECTS / 4 SWS		
Arbeitsaufwand:	Kontaktstunden:	47 h	
	Selbststudium:	78 h	
	Gesamtaufwand:	125 h	
Lehrveranstaltungen des Moduls:	3.3: Software Engineering (WMod_SWEng_M)		
Lehrformen des Moduls:	3.3: SU/Ü - seminaristischer Unterricht/Übung		
Prüfungsleistungen:	3.3: LN - SA – Seminararbeit mit Präsentation (WMod_SWEng_M)		
Verwendbarkeit für andere Studiengänge:	Dieses Modul wird vom Masterstudiengang Wirtschaftsingenieurwesen der Fakultät Wirtschaftsingenieurwesen als Wahlfach angeboten.		
Voraussetzungen gemäß SPO:			
Keine			
Empfohlene Voraussetzungen:			
Keine			
Angestrebte Lernergebnisse:			
<i>3.3: Software Engineering:</i> Am Ende der Veranstaltung sind die Studierenden in der Lage...			
Fachkompetenz • die Grundlagen des Softwareengineerings zu erläutern. • Softwareanforderungen zu ermitteln und zu strukturieren.			
Methodenkompetenz • Softwarekomponenten und Schnittstellen formal zu beschreiben. • einfache Softwarekomponenten anhand von Modellen in einer höheren Programmiersprache zu entwickeln, zu testen und zu dokumentieren. • Entwicklungswerkzeuge (Softwareengineering Tool-Chain) effektiv anzuwenden.			
Sozialkompetenz • problemorientiert in Teams und über Teamgrenzen hinweg bei der Erstellung von Softwareanwendungen zusammenzuarbeiten.			

Inhalt:
<i>3.3: Software Engineering:</i> • Grundlagen des Software-Engineering • Fähigkeiten zum Arbeiten mit Computern (Grundlagen) • Kenntnisse der grundlegenden Prinzipien der Softwareentwicklung (Grundlagen) • Erlangung von Sicherheit im Umgang mit verschiedenen Softwareentwicklungsumgebungen (IDE), sichere und zielführende Anwendung • Sicherer Umgang mit Softwaremodellen und Modellierungstools • Entwurf von Algorithmen (Methodik und Anwendung) • Erfassen von Benutzungsanforderungen • Validierung anhand von Benutzungsanforderungen

Subjects of the module:	3.3: Software Engineering (SWEng_M-WI)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – StA - Student research project without oral presentation 8-15 pages (SWEng_M-WI)		
Usability for other study programs:	This module is offered as an elective by the master’s program Engineering and Management of the Faculty of Engineering and Management.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: Software Engineering			
On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge			
• explain the foundations of software engineering.			
Methodology			
• analyze and structure software requirements.			
• formally describe software components and interfaces.			
• develop, test, integrate, deploy, and document simple software components using a high-level programming language.			
• use development tools (software engineering tool-chain) effectively.			
Social competence			
• cooperate in teams during the development of software applications using agile project management methods.			

Content:
3.3: Software Engineering • Foundations of software engineering • Systematic analysis of software requirements • Modelling of requirements and components of a software product • Specification and documentation of software component interfaces • Development of software modules in teams including test and documentation • Consistent use of software engineering tools (IDE, sourcecode-, build-, artifact-management)
Literature:

Additional remarks:
The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Strategic Brand Development & Go-to-Market Management			
Module abbreviation:	ECV_SBD&GtMM	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Weiss, Patrick		
Lecturers:	Seckinger, Christoph; Weiss, Patrick		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Strategic Brand Development & Go-to-Market Management (ECV_SBD&GtMM)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – PA - project work (ECV_SBD&GtMM)		
Usability for other study programs:	The module is offered in other master’s degree programs as well.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
Completed Business Model Canvas and a defined startup idea.			
Objectives:			
3.3: Strategic Brand Development & Go-to-Market Management:			
Knowledge			
- Students understand strategic principles of brand development and their application in startup, corporate venture building, and early-stage investment contexts. - They are familiar with key models of brand identity (e.g., Kapferer’s Brand Identity Prism) and can apply them to develop coherent brand systems. - They are able to analyze markets, define a positioning, and translate strategic insights into actionable brand and marketing concepts, using generative AI-Tools for market research (synthetic personas) or efficient asset creation. - Students can connect brand-building decisions to measurable business outcomes.			
Methodology			
- Students can conduct structured market and customer analyses to derive relevant brand insights. - They are able to plan, develop, and test brand concepts through iterative project work; or evaluate existing brand concepts in e.g. investment scenarios. - They can design and evaluate marketing activities using frameworks such as the Bullseye approach.			

Personality

- Students strengthen their creative and analytical problem-solving skills through iterative brand development.
- They develop the ability to manage complex strategic and creative processes independently.
- They reflect on their personal role as brand creators and decision-makers in dynamic market environments.

Social competence

- Students collaborate effectively in interdisciplinary teams combining business and technical expertise.
- They provide constructive feedback and integrate diverse perspectives during team and peer-review sessions.

Content:

3.3: Strategic Brand Development & Go-to-Market Management:

The module follows a structured brand-building process consisting of five interconnected stages (5D Method):

1. **Discover:** Re-asses prior work, analyzing the existing startup idea's market and customer insight using secondary and primary research data; identification of core customer jobs and pain points for further usage in the brand development. Students without an existing business model idea will use this timeframe for initial set-up.
2. **Define:** Segmentation, targeting, and positioning in the context of new ventures; developing a clear brand route and audience understanding.
3. **Develop:** Creation of the brand identity (e.g., using Kapferer's Brand Identity Prism) and definition of major building blocks such as naming, brand character, and tone of voice.
4. **Design:** Translation of identity into visual assets; production of brand guidelines and Figma design templates.
5. **Deploy:** Planning and execution of a Go-to-Market strategy using the Weinberg & Mares' Bullseye framework; testing and evaluation of early marketing traction ideas.
6. **Presentation:** Final brand presentation and reflection on learnings.

Literature:

Compulsory:

- WHEELER, Alina and Rob MEYERSON, 2024. Designing Brand Identity: A Comprehensive Guide to the World of Brands and Branding. Newark: John Wiley & Sons, Incorporated. ISBN 978-1-119-98482-5

Recommended:

- KAPFERER, Jean-Noël, 2012. The new strategic brand management: advanced insights and strategic thinking. London ; Philadelphia, Pa. ; New Delhi: Kogan Page. ISBN 978-0-749-46516-2
- WEINBERG, Gabriel and Justin MARES, 2015. Traction: how any startup can achieve explosive customer growth. New York, New York: Portfolio/Penguin. ISBN 978-1-59184-836-3, 1-59184-836-9
- Rachitsky, L. (Ongoing). Lenny's Newsletter / Podcast. A leading resource on startup growth, product management, and go-to-market strategies.

Additional remarks:

Exam: Project work to be performed during the semester, including the development of brand concept for a new venture, creation of a two-page brand guideline, preparation of a Figma template, and the planning and execution of one to three short marketing activities. Written documentation (approx. 10-15 pages) and presentation (15 minutes).

Additional remarks: A voluntary bonus system is offered: Within the course, selected topics may be taken up by students for individual preparation and presentation. Each qualitatively completed presentation earns bonus points amounting to a maximum of 10% of the total achievable exam points. The creditability and maximum allocation of bonus points follow the regulations of the APO.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

SUS - Sustainable HR Management			
Module abbreviation:	GBU-SUS-SHRM	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Lieske, Claudia		
Lecturers:	Lieske, Claudia; Wolfenstetter, Silke		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: SUS - Sustainable HR Management (GBU-SUS-SHRM)		
Lecture types:	3.3: SU/Ü - lecture with integrated exercises		
Examinations:	3.3: LN – PA - project work (GBU-SUS-SHRM)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Business.		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
3.3: SUS - Sustainable HR Management:			
Knowledge			
• The students know about the aspects of sustainability management with a focus on the role of Human Resource management. • They have comprehensive knowledge about tools and instruments available for the sustainable management of people with dedicated attention to HR practices and health management.			
Methodology			
• Students drive analysis-based solutions concerning problems in sustainable HR Management and health management. • They analyse the impact of business strategies regarding sustainable HR Management in a company.			
Personality			
• The students work independently on tasks in the field of sustainable HRM and health management. • They carry out independent research and analysis on current trends and developments in the field of sustainable HRM and health management. • The students foster ethical responsibility and long-term thinking in business decision-making.			

Social Competence • The students can work out a solution together in a larger group. • The students create an inclusive and respectful environment for collaboration in international teams.
Content: 3.3: <i>SUS - Sustainable HR Management:</i> The course will examine different aspects about sustainable HR Management and health management. • Students analyse the role of corporate sustainability and CSR for the human resource management practice. • Students reflect and evaluate the different practices in health management. • Students develop and produce a research paper that explains a particular issue or phenomenon of the discussion on sustainable HR and health management. Based on a 360 degrees approach to skills development, students will be actively involved in the development and evaluation of presentation skills. They will provide feedback on their colleague's presentations after every session and will reflect and evaluate the outcome of their presentation using a self-assessment instrument.

Additional remarks: The main part of the module is a block seminar that will take place from June 10th to 12th, 2026 in the Bamberg Youth Hostel with a presentation of the seminar papers of all students. There will be accommodation and food costs for the youth hostel which have to be paid by the students.

The rest of the course can take place either partially or entirely in a virtual format.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Sustainable Market Communication			
Module abbreviation:	SMT_SusMarCom_FW	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Hoppe, Holger		
Lecturers:	Hoppe, Holger; von Hörsten, Anja		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Sustainable Market Communication (SMT_SusMarCom_FW)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – schrP, written exam, 90 minutes (SMT_SusMarCom_FW)		
Usability for other study programs:	This module is offered as an elective by the master’s degree program Sustainability Management and Technologies of the Faculty of Sustainable Infrastructure.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Sustainable Market Communication</i> On completing this module, the students will have achieved the following learning goals. Students are able to... Knowledge - outline the origin, purpose, and structure of sustainability reporting and assess the impact of transparency on reputation, investor decisions, and regulatory compliance. - compare instruments of marketing management and marketing communication (both classic and digital), use them in a target group-oriented manner, and supplement them with sustainability requirements. - select relevant reporting standards, such as GRI, DNK, SASB, TCFD, and EU requirements like CSRD, ESRS, and EU taxonomy, and apply them in practice while explaining their interfaces with marketing. Methodology - systematically analyze communication relationships with stakeholders, prioritize their expectations, and derive suitable dialogue and feedback formats. - design digital marketing strategies, such as content, social, and performance marketing, define KPIs, and critically evaluate risks of greenwashing or bluewashing. - define data, process, and governance structures for an auditable and comparable sustainability report, prepare key figures, and create consistent draft reports.			

Social competence - develop integrated communication and reporting concepts in interdisciplinary teams, constructively moderate divergent stakeholder perspectives, and achieve consensus-based solutions. Personality - present technical results appropriately, whether internal or external, analog or digital, proactively incorporate feedback, and manage a continuous improvement process.
Content: <i>3.3 Sustainable Market Communication</i> - Basics of communication relationships with stakeholders - Marketing instruments and methods - Market research, marketing planning and processes - Market strategies - Sustainability-oriented marketing - Sustainability-oriented communication - Sustainability reporting

Additional remarks: The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases. This course takes place on the NEUBURG campus!

Technology Assessment and Business Ethics			
Module abbreviation:	TechAssBusEth_M-GFT	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Bechthold, Laura		
Lecturers:	Bechthold, Laura		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Technology Assessment and Business Ethics (TechAssBusEth_M-GFT)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – mdIP – oral exam (TechAssBusEth_M-GFT)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Foresight and Technology Management of the Faculty of Engineering and Management		
Prerequisites according examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Technology Assessment and Business Ethics:</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge - define and explain the concept, principles, and process of technology assessment. - define and explain the concepts of business ethics and technology ethics. - define and explain the concept of corporate digital responsibility and understand related tasks from a managerial perspective. - understand the tasks and importance of compliance and integrity leadership to foster ethical behavior in organizations.			
Methodology - compare and contrast different methods of technology assessment and evaluate their suitability for different purposes. - apply methods of ethical technology foresight to evaluate societal and environmental risks and opportunities related to emerging technologies. - apply frameworks for responsible innovation to ensure the ethical development and application of new technologies.			

Social competence - incorporate ethical considerations and stakeholder perspectives into strategic decision-making processes. Personality - critically reflect on and discuss emerging technologies regarding uncertainties, ambiguities, cognitive biases, and controversies based on different schools of moral reasoning.
Content: <i>3.3: Technology Assessment and Business Ethics:</i> - Concept, history, and relevance of technology assessment - Concept and relevance of business ethics and technology ethics - Fundamental principles of technology assessment (e.g., precautionary principle) - Qualitative, quantitative, and experimental designs for technology assessment - Methods of ethical foresight for emerging technologies - The relevance of unconscious biases and noise in the digital world - Schools of moral reasoning: Universalism, utilitarianism, rights-based approaches, fairness approaches, virtue ethics - Frameworks for ethical leadership, decision making and responsible innovation (e.g., the Ethical Cycle) - Frameworks for corporate ethics and digital responsibility, as well as related compliance processes The curriculum is supplemented by case studies and in-class debates on controversial emerging technologies (exemplary topics are cryptocurrency, biohacking, deep fakes, geo-engineering, and robot-human-interaction).

Additional remarks:

An additional selection of readings (articles and case studies) on current emerging technologies will be handed out at the beginning of the semester.

A voluntary bonus system is offered including the preparations of small presentations. Participation in the bonus program leads to bonus points for the examination performance. The creditability as well as maximum crediting of bonus points takes place according to the APO.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Technology Design and Evaluation			
Module abbreviation:	TechDesEva_M-GFT	SPO-No.:	3.3
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Schönmann, Alexander		
Lecturers:	Schönmann, Alexander; Schropp, Theresa		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Technology Design and Evaluation (TechDesEva_M-GFT)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN - schrP90 - written examination, 90 minutes (TechDesEva_M-GFT)		
Usability for other study programs:	This module is offered as an elective by the master’s program Global Foresight and Technology Management of the Faculty of Engineering and Management		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Technology Design and Evaluation:</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge - know and apply important methods of technology management and explain them. - understand the tasks of technology development and manage R&D processes.			
Methodology - propose appropriate technology development process models based on use case and company size. - design the implementation of workshops for eliciting requirements for development process models.			
Social competence evaluate technological solutions in a team and represent the advantages and disadvantages of these solutions.			
Content:			
<i>3.3: Technology Design and Evaluation:</i>			

- Modern technologies and technology trends
- Organisation and role of Technology Management
- Technology Dynamics (Lifecycle models)
- Technology Intelligence (Technology scanning, Technology monitoring, Technology scouting, Technology identification, search field description)
- Technology information sources (formal, informal sources)
- Technology evaluation (maturity, potential, economic efficiency, Technology portfolio analysis)
- Technology planning (Roadmaps)
- R&D Management
- Technology development (Technology Stage Gate)
- Application-specific selection of adequate technologies
- Linking Technology development and Product development processes
- New Product development: Development strategies and degree of newness; "Valley of death"
- Product Development processes: e.g. V-Model, Spiral model, Lean Start-up, Trends in process design
- Quality Function Deployment
- Product Architecture: functional and physical elements (differential design vs. integral design), Types of modularity
- Role of design in the development process (e.g. DFX)
- Digital Technologies & Digital Ecosystems
- Biomimetics (learning from nature)
- Technology exploitation strategies
- Technology protection
- Case studies and Industry examples on latest trends and technologies

Additional remarks:

A voluntary bonus system is offered: In the course, topics on methods of technology management are offered for individual processing and presentation, which lead to bonus points for the examination performance for each qualitatively processed task of a total of maximum 10% of the overall exam points. The creditability as well as maximum crediting of bonus points takes place according to the APO.

Lectures contain digital learning elements for self-study, such as learning videos or meetings via web conferences.

The examination can be held in digital form on a PC at the university campus.

The course is held on-site. However, under special circumstances, it may also take place virtually.

Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

Visual Interface Design			
Module abbreviation:	UXDM_FWVID	SPO-No.:	3.3
Curriculum:	Programme	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Elective Subject (WPF)	2
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Variable term
Responsible for module:	Stahl, Ingrid		
Lecturers:	Stahl, Ingrid		
Credit points / SWS:	5 ECTS / 4 SWS		
Workload:	Contact hours:	47 h	
	Self-study:	78 h	
	Total:	125 h	
Subjects of the module:	3.3: Visual Interface Design (UXDM_FWVID)		
Lecture types:	3.3: SC / E: seminar course with exercises		
Examinations:	3.3: LN – PA - Project work (UXDM_FWVID)		
Usability for other study programs:	This module is offered as an elective by the master’s program User Experience Design of the Faculty of Computer Science.		
Prerequisites according to the examination regulation:			
None			
Recommended prerequisites:			
None			
Objectives:			
<i>3.3: Visual Interface Design</i> On completing this module, the students will have achieved the following learning goals. Students are able to...			
Knowledge • understand essential aspects of interface design. • develop knowledge of state-of-the-art interface design, including the conception and analysis of interface designs. • gain comprehensive knowledge of User Interface Design Styles versus Trends.			
Methodology • recognize and evaluate the quality of visual design. • analyze and evaluate user interfaces, comparing state-of-the-art with historical designs. • develop user interfaces independently using appropriate technical and methodological skills. • create and argue for different interface designs.			
Social competence • organize themselves effectively and work collaboratively in teams. • present ideas and processes related to UI development in front of an audience.			

Personality realize user interfaces based on task descriptions and grasp the current state of visual design to apply it to their own projects.
Content: 3.3: Visual Interface Design - Introduction to the project, brainstorming, team building - Phase 1: analyze and name styles, define appearance, color palette (in quality and quantity) icon style, layout and animations - Phase 2: practical work. Selection of an existing interface (specifically chosen or given by lecturer), Re-design in three completely different styles (interface designs) - Phase 3: documentation. Summary and processing of the analysis. Preparation of the three own interface designs. With explanation and justification - Phase 4: internal presentation of the final outcome (including one midterm presentation during the semester)
Literature: <i>Compulsory:</i> - SHNEIDERMAN, Ben, Catherine PLAISANT und Maxine COHEN, 2018. <i>Designing the User Interface: Strategies for Effective Human-Computer Interaction</i>. 6th Edition. ISBN 978-1-292-15391-9 - STAPELKAMP, Torsten, 2010. <i>Interaction- and Interface design: Web-, Game-, Product- und Service design; Usability and Interface as Corporate Identity</i>. Berlin [u.a.]: Springer. ISBN 978-3-642-02073-5, 978-3-642-02074-2 https://opac-ku-de.thi.idm.oclc.org/s/thi/de/2/10/BV036761466 <i>Recommended:</i> - NORMAN, Donald A., 1994. <i>Things that make us smart: defending human attributes in the age of the machine</i>. 1. edition. Reading, Mass. u.a.: Addison-Wesley. ISBN 0-201-62695-0 - CAMERON, Andy and Francesco MENEHINI, 2004. <i>The art of experimental interaction design</i>. 1. edition. Hong Kong: Systems Design. ISBN 988-97065-8-X, 978-988-97065-8-6 - STICKDORN, Marc and others, 2018. <i>This is service design doing: applying service design thinking in the real world: a practitioners' handbook</i>. 1st edition. Sebastopol, CA: O'Reilly. ISBN 978-1-491-92715-1 - NORMAN, Donald A., 1988. <i>The psychology of everyday things</i>. New York: Basic Books. ISBN 0-465-06709-3
Additional remarks: The course combines knowledge about methods in design with a very concrete interface design assignment. For individual tasks, Adobe Cloud software (or alternative tools for creating visual interface designs) is used for this purpose. The course is held on-site. However, under special circumstances, it may also take place virtually. Course selection varies depending on availability and demand. The actual selection for each semester can be found in the timetable. Courses may be canceled at the beginning of the semester. Participation is limited in some cases.

5.3 Voluntary Elective Subjects

The following modules may be selected to support the preparation and conduct of the Master thesis:

1. Presentation skills and academic writing C1 (winter)
2. Academic Writing and Presenting (summer)

The modules are offered by the Language Center. A module description can be found in the module handbook of the Language Center.

These courses are offered for students who voluntarily would like to refresh or deepen their English language and academic writing skills.

No ECTS credits are awarded. Successful participation will be confirmed in the grade sheet.

5.4 Master Thesis

Master Thesis			
Module abbreviation:	ECV_MT	SPO-No.:	6.1
Curriculum:	Program	Module type	Semester
	Entrepreneurship and Corporate Venturing (SPO WS 25/26)	Compulsory Subject	3
Module attributes:	Language of instruction	Duration of module	Frequency of offer
	English	1 semester	Winter and summer semester
Responsible for module:	Bader, Martin		
Lecturers:	Professors lecturing in the ECV master program		
Credit points / SWS:	25 ECTS / 0 SWS		
Workload:	Contact hours:	0 h	
	Self-study:	750 h	
	Total:	750 h	
Subjects of the module:	6.1: Master Thesis (ECV_MT)		
Lecture types:	-		
Examinations:	6.1: Koll/MA: Master Thesis with colloquium (weight 4:1) (ECV_MT)		
Usability for other study programs:	None		
Prerequisites according to examination regulation:			
Release of the thesis subject requires the successful completion of credits and examinations totaling at least 30 ECTS. There is a six-month preparation period for the master's thesis. The regulations on the issuance of the master's thesis in the general examination regulation of the Technische Hochschule Ingolstadt are also applicable. For Dual Students: According to §30 (5) APO, dual study students are required to conduct their master's thesis at the dual study partner under the scientific surveillance of the THI professor. The results of the thesis need to be presented to the partner company and the examining professor.			
Recommended prerequisites:			
None			

Objectives:
6.1: Master Thesis

The students demonstrate that they can independently work out a complex problem from the Entrepreneurship and Corporate Venturing field in a comprehensive, practice-oriented, and scientifically sound manner within a specified period. The students prove that they can intensively analyze and process complex problems, communicate professionally with possible partners, and come to decisions or find solutions. Students must demonstrate the ability to independently understand, apply, and create scientific theory. The student will work on the research design, methods, and resulting implications.

For Dual Students: According to §30 (5) APO, dual study students are required to conduct their master's thesis at the dual study partner under the scientific surveillance of the THI professor. The thesis results must be presented to the partner company and the examining professor.

Content:
6.1: Master Thesis

1. Individual definition of the topic of the master thesis
2. Planning of the master thesis
3. Project realization by applying the acquired scientific skills and methods
4. Project controlling and interaction with the primary supervisor
5. Presentation of results in the form of a scientific paper and peer-discussion

The Master Thesis will be coached and evaluated by a professor. Students choose their topics individually.

Literature:
Compulsory:

- APA Style Guide – Publication Manual of the American Psychological Association, Seventh Edition (2020) American Psychological Association, available at: <https://apastyle.apa.org/style-grammar-guide-lines>
- Bell, E., Bryman, A. & Harley, B. (2022). Business research methods. Sixth edition. Oxford: Oxford University Press

Recommended:

- GLASMAN-DEAL, Hilary, 2021. *Science research writing: for native and non-native speakers of English*. 2nd Edition. New Jersey; London; Singapore; Beijing; Shanghai; Hong Kong; Taipei; Chennai; Tokyo: World Scientific. ISBN 978-1-78634-783-1, 978-1-78634-784-8

Additional remarks:

If students seek to graduate in the respective term, the deadlines for the official hand-in of the thesis are:

- Deadline winter semester: January 15.
- Deadline summer semester: July 15.

Please note that the master's colloquium has to be completed at least two weeks before the end of the semester (i.e., September 15 for the summer semester, February 28 for the winter semester)

According to §30(5) APO, the following requirements apply to students with dual study option:

- Dual students conduct the final thesis in cooperation with their partner company under THI's academic supervision.
- The academic supervisor stays in contact with the partner company and conducts at least one scientific discussion.
- The dual students present the basic outcomes of the thesis to the partner company and the supervising professor.
